

## OPERATIONAL PLANNING COMMITTEE (NEW PRODUCTS)

Tom Cravotta

James Gear

Roger Slagle

Sue Tafur

**Mission:** To create a dynamic product for the New Products Directorate to lead, guide, evaluate, reward, and identify future business opportunities.

Operational Process

### GOALS

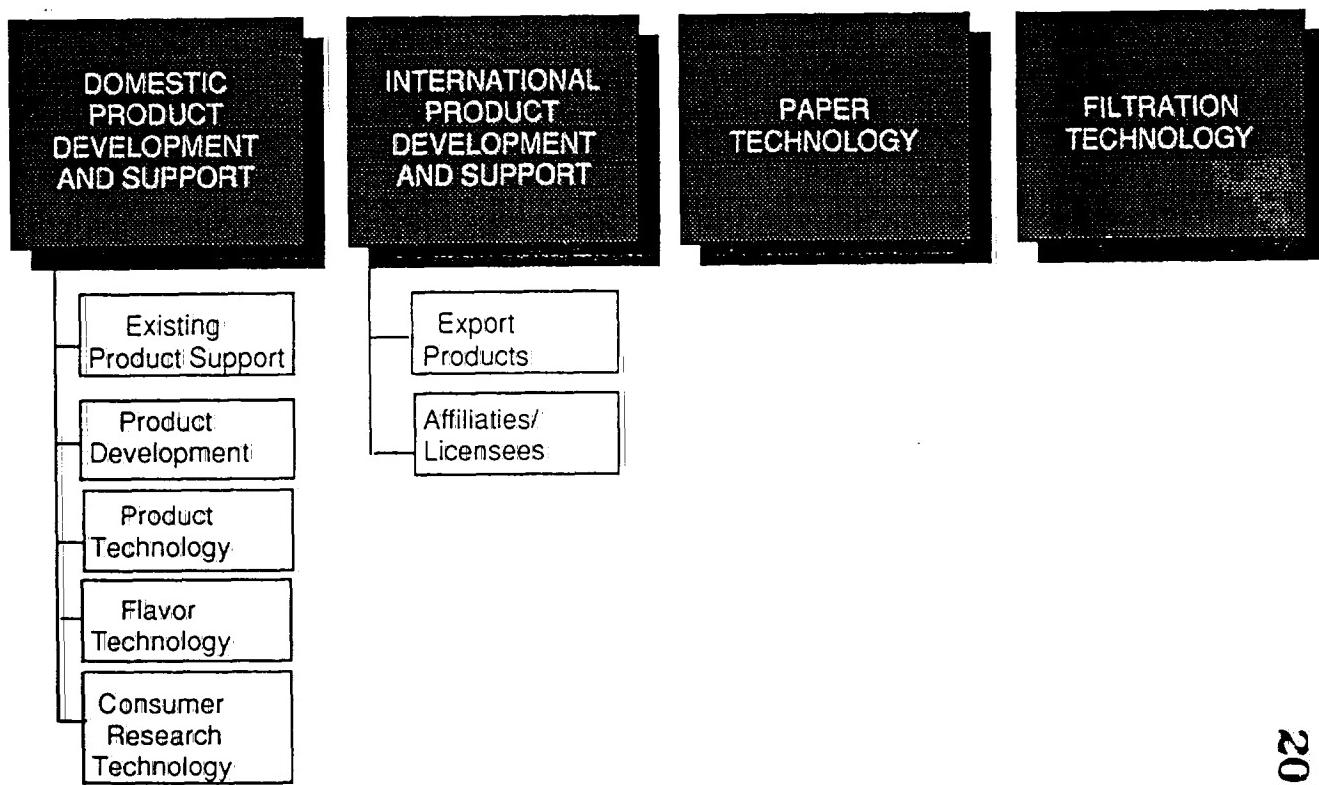

- 1) To make some sense out of the operational plans
  - establish a basis for organization
  - identify missing elements/duplication
  - evaluate program content
- 2) To provide a "user-friendly" compilation of plans
  - establish some degree of uniformity
  - develop a system for indexing and cross-referencing
  - identify how much detail is really needed  
*→ for which End Point i.e. for R + D plan  
• product development  
• launch schedule*
- 3) To provide a tool to help management perform more efficiently
  - establish a mechanism for assessing progress
  - facilitate quarterly reports and plan updates
  - provide access to resource allocations

# PRODUCT DEVELOPMENT

## Major Programs

2021385263

## DOMESTIC PRODUCT DEVELOPMENT AND SUPPORT

## EXISTING PRODUCT SUPPORT

### STRATEGIC GOAL ACTIVITIES

1

- ET/NET Inclusion
- Cigt. Manufacturing OV
- Packaging Studies
  - High Barrier Films
  - Printing Inks
- Factory Modernization Support
  - Primary
  - Small Scale Process Involvement
- Tobacco Materials and Reclamation
- Processing Plant Support
  - Alternate Sheet Sourcing
  - BL Plant Support
  - Park 500
  - Flavor Center Support
  - Cooked Flavor Capacity
- Subjective Panels
  - Domestic
  - International
  - PED Project
  - Training
- Marlboro Standardization
- Cigt. Storage/Transportation Study

2021385264

## DOMESTIC PRODUCT DEVELOPMENT AND SUPPORT

### PRODUCT DEVELOPMENT

### STRATEGIC GOAL ACTIVITIES

- Premium Brands:
  - B&H KS
  - Merit 1, 3, 6mg
  - Virginia Slims
  - Parliament KS Menthol
- Marlboro
  - Medium 100's
  - Full Flavor and Lights Blend Study
  - Extra Lights
  - Ultra Lights
  - Wides
- Discount Brands
  - Alpine
  - Bucks
  - Generic Full Flavor Menthol
  - Slims
- Marketing Support Program
  - Package Odor Study
  - Ad Packs
  - Circumference Study
- Consumer Testing.
  - POLs

2021385265

## DOMESTIC PRODUCT DEVELOPMENT AND SUPPORT

### PRODUCT TECHNOLOGY

#### STRATEGIC GOAL ACTIVITIES

3

# CAST LEAF PRIORITIES

I. **Objective:** Optimize the Current RCB Process for Improved Sheet Physical Properties, Production Capacity and Environmental Goals.

A. **Strategy:** Duplicate Production RCB in the Pilot to Subjectively Establish Processing Conditions.

## 1. **Plans:**

Replicate Trials of Normal BL Feedstock and Formulation Under Selected Process Conditions.

Establish Conditions to Duplicate Production RCB.

## 2. **Conclusions:**

These Results Will Be the Basis for Optimizations of Pilot Conditions Prior to Production NBL Trials

2021385273

- B. **Strategy:** Evaluate Modified Formulations and Conditions with the NBL Process to Meet Objectives and Maintain Subjective Parity with RCB.

1. **Plans:**

Remake NBL (Finer Ground Feedstock) as Follows:

- 7.5, 10.0 and 12.5 Parts NH<sub>4</sub>OH
- 18, 20 and 22% Slurry Solids at Constant Dryer Temperature/Adjust Rate
- Binder Temperature 160<sup>0</sup> F, Slurry Aged 1 Hour.

2. **Conclusions:**

Subjective Parity with Production RCB from Pilot Trials Have Potential to Reduce Stack Emissions, Increase Capacity and Improve Physicals.

2021385274

**II. Objective:** Develop a Cast Leaf Product to Meet Worldwide Capacity Needs.

**A. Strategy:**

RTD is Developing a Business Plan Analysis for a Plant in Europe. Pilot Trials are in Progress with Guar Binder and Flavor Systems to Substitute for RLB.

**1. Plans:**

- Identify Trials with Improved Physicals for Subjective Comparisons to RLB
- Guar Gum Levels Below 10% and/or Cobinder Systems
- Flavor Systems Include DAP, Isosweet and Flavors.

2021385275

# **CAST LEAF TESTING PROTOCOL**

## **A. Weekly Planning Meetings**

**with RTD - Grant Gellatly**

## **B. Test Sheet Trial Information**

## FILTRATION TECHNOLOGY PROGRAM 1992 OPERATIONAL PLAN

### I. GENERAL PROGRAM INTRODUCTION

The goal of the Filtration Technology program is to provide filtration research which will allow for the development of new or improved products. To support Operations in their five-year plan, Calgon SCCW carbon is being optimized by removing the additives. To grow the business in the short-term, improvements in cost and availability of the Merit Ultima filter core material are being developed. Also, significant work on carbon web materials and porous combining wrap are supporting our Export business. PM web and other novel web materials are being developed to address our consumer's desires with new technologically driven products. CO reduction via catalysts and development of novel filter types is further supporting that goal. External requirements and future products are being supported with model making, process development, and development of new filtration technology.

### II. OUTLINE

#### STRATEGIC GOAL NUMBER 1 SUPPORT OPERATIONS FIVE YEAR OBJECTIVES

##### OBJECTIVE:

Investigate alternative plasticizer systems for cellulose acetate. Determine issues related to the implementation of these plasticizer systems for new products or as a replacement for triacetin.

##### Strategies:

Conclude study of triethyl citrate as a replacement for triacetin on menthol and regular product types.

Determine the issues related to natural-based glycerine triacetin.

Screen suggested plasticizers to determine their fitness for use on PM products.

##### OBJECTIVE:

Design and demonstrate a product and process to produce a Parliament filter system which does not require the use of on-line laser ventilation perforation.

##### Strategies:

Investigate the use of hollow tubes in filter component combining using porous combining wrap and conventional perforated tipping paper.

Investigate the use of pre-perforated mouthpiece paper conventional perforated tipping paper.

2021385287

**STRATEGIC GOAL NUMBER 3**  
**ADDRESS CONSUMERS DESIRES WITH NEW TECHNOLOGY-DRIVEN PRODUCTS**

**OBJECTIVE:**

Develop web cigarette filtration system(s) which offer the consumer perceived benefits when incorporated into new cigarette systems.

**Strategies:**

Develop a non-woven wet-laid sheet of cellulose acetate and cellulosic fibers.

Develop a non-woven dry-laid sheet of cellulose acetate with or without thermoplastic bonding fibers.

Develop additives and additive application systems to modify the filtration and/or subjective performance of various web filter media.

Develop cellulose or cellulose acetate modification processes to provide filtration and/or subjective performance advantages for new products.

Develop manufacturing processes and operations to produce filters from new filter media.

**OBJECTIVE:**

Develop a CO removal catalyst for use in a filter system.

**Strategies:**

Test CO removal catalysts supplied by Seton Hall University.

Develop a room temperature CO removal catalyst using Seton Hall University technologies.

**OBJECTIVE:**

Design, evaluate, and develop new filter concepts that provide benefits to our consumers.

**Strategies:**

Develop the capability to manufacture PCC filters in-house.

Conduct joint development of heterofil filter materials with Hoechst/Celanese.

Investigate CA tow made with reduced bleach or unbleached cellulose.

- Evaluate DHS Compact tow production system.

2021385288

**STRATEGIC GOAL NUMBER 3**  
**ADDRESS CONSUMERS DESIRES WITH NEW TECHNOLOGY-DRIVEN PRODUCTS**  
(con't)

Evaluate ultra low denier per filament tow items.

Evaluate novel vendor filters.

Investigate/evaluate degradable filter material.

**FILTER TECHNOLOGY SUPPORT TO OTHER AREAS**

Removal of additives from SCCW carbon.

Evaluation of carbon web samples on Project 41 in PCC filter.

Qualification of new precoated porous combining wrap for use on Lark tar reduction.

Evaluation of strip applicator units (PM and MOLINS designs).

Domestic Product Development

Sensory Technology Program.

Tobacco Biochemistry Program.

Support Project BETA with filtration technology.

Evaluation of degradable packaging materials as they become available.

2021385289

*DICK*

## **PAPER TECHNOLOGY**

### **OPERATIONAL PLAN ----- ISSUES AND OBSTACLES**

**2021385290**

## OUTLINE OF PAPER TECHNOLOGY OPERATIONAL PLANS

### I. Introduction

### II. Cigarette Paper Specifications/Quality (Strategic Goal #1)

1. Effects of paper properties
2. Effects of paper properties - low delivery models

### III. Cigarette Paper Specifications/Cost (Strategic Goal #1)

1. Cost profile
2. Cigarette evaluation
3. Qualify second source for 10-058A paper

### IV. Wood Pulp Papers (Strategic Goal #1)

1. Assess availability of wood pulps
2. Evaluate papers
3. Determine paper specifications
4. Demonstrate parity of full margin products

### V. Reduced Sidestream Visibility (Strategic Goal #3)

1. Finalize Virginia Slims/Superslims paper
2. Develop ground magnesite paper
3. Develop synthetic magnesite paper
4. Develop hydromagnesite/brucite filled paper
5. Develop sol-gel process magnesium carbonate paper
6. Develop rhombohedral calcium carbonate paper
7. Sidestream chamber analytical studies
8. Pyrolysis chemistry of cigarette paper

### VI. Reduced Sidestream Irritation (Strategic Goal #3)

1. Identify causes of irritation
2. Develop analytical methods
3. Devise methods to reduce irritants
4. Define irritation

### VII. Burn Rate Control (Strategic Goal #4)

1. Apply cellulosic bands to paper on wet end
2. Apply cellulosic bands by printing
3. Develop paper strip application
4. Develop slower burning conventional papers -- rhombohedral calcium carbonate

\* Required communication  
with B. W. Johnson  
specifications

2021385291

## **PAPER TECHNOLOGY**

### **Cigarette Paper Specifications/Quality (Strategic Goal #1)**

**A. OBJECTIVE:** To determine those cigarette paper parameters which most affect cigarette performance and manufacturing processes and set meaningful specifications and tolerances for cigarette papers.

**B. STATUS ---- ISSUES**

1. Calcium carbonate tolerances tightened, but not at the desired target level.
2. Decrease in cooperation from Kimberly-Clark, in general.

**C. PARTICIPATING GROUPS/INDIVIDUALS**

PAPER DEVELOPMENT	FLOYD, BALDWIN
PED	TINDALL, JONES
QA	WERKMEISTER
PURCHASING	FORSMARK, EMIG, GRIFFIN
MANUFACTURING/OP	
SERVICES	SWEENEY, WATTS
SUPPLY CHAIN	B.CARTER, ROWECAMP

**D. OTHER RESOURCES**

ARD  
CTSD  
SEMIWORKS

2021385292

## **Cigarette Paper Specifications/Cost (Strategic Goal #1)**

**A. OBJECTIVE:** To consolidate three grades of 46 Coresta flax papers with elevated citrate levels used in manufacturing to one grade, and to determine whether further consolidation of the existing seven grades is feasible.

### **B. STATUS ---- ISSUES**

1. Cost of 10-058A paper needs to be further negotiated with KC.
2. Alternative suppliers need to be developed.

### **C. PARTICIPATING GROUPS/INDIVIDUALS**

PAPER DEVELOPMENT	GEISZLER
QA	WERKMEISTER
PURCHASING	EMIG
MANUFACTURING/OPERATIONS	
SERVICES	SWEENEY, WATTS
SUPPLY CHAIN	R. KELLY

### **D. OTHER RESOURCES**

FINANCE  
INDUSTRIAL ENGINEERING

2021385293

## **Wood Pulp Papers (Strategic Goal # 1)**

**A. OBJECTIVE:** Evaluate the viability of replacing flax papers with wood pulp papers for full margin bands and develop the appropriate papers, as required.

### **B. STATUS --- ISSUES**

1. Pulp suppliers processing additives.
2. Possible subjective unacceptability.
3. Consistency of pulp supply.

### **C. PARTICIPATING GROUPS**

PAPER DEVELOPMENT ROGERS, GEISZLER, BALDWIN  
PURCHASING FORSMARK, EMIG  
PRODUCT DEVELOPMENT WHITE

CTSD  
SEMIWORKS  
PED  
RICHMOND PANEL

2021385294

2021385295

### Products with Reduced Sidestream Visibility (Strategic Goal #3)

**A. OBJECTIVE:** To develop a proprietary cigarette wrapper which will reduce visible sidestream smoke by at least 70% in a full circumference cigarette, as compared to an appropriate control, with subjective equivalent to a conventional cigarette in 1992.

#### B. STATUS ---- ISSUES

##### Calcium carbonate papers:

1. Phosphate-calcium carbonate interaction is process dependent and affects sidestream reduction.
2. New process at Kimberly-Clark's Spotswood mill which requires processing aid,
3. Porosity-sidestream reduction relationship appears to be different from that of previous papers.

##### Magnesium carbonate papers

###### Baymag magnesite

1. Time and cost to commercialize.

###### Synthetic magnesite

1. Time and cost to commercialize greater than with Baymag.

###### Sol-gel magnesium carbonates

1. Papermaking and scale-up issues.

*Best bet of synthetic mag carbonates: NY Poly material, but not in 92.*

#### C. PARTICIPATING GROUPS/INDIVIDUALS

CHEMICAL RESEARCH SEEMAN, PODRAZA, KALLIANOS, PAINE, FOURNIER

#### D. OTHER RESOURCES

ARD

CTSD

SEMIWORKS

PED & FLAVOR TECHNOLOGY

### **Reduced Sidestream Irritation (Strategic Goal #3)**

**A. OBJECTIVE:** Initiate studies to assess feasibility of reducing the levels of those chemical classes in sidestream smoke which are most likely to contribute to irritation by the fourth quarter of 1992.

#### **B. STATUS --- ISSUES**

1. Just getting started, making some progress.
2. Difficult assignment.

#### **C. PARTICIPATING GROUPS**

CHEMICAL RESEARCH

ANALYTICAL RESEARCH

PED

PAPER DEVELOPMENT

DOMESTIC & INTERNATIONAL PRODUCT DEVELOPMENT

2021385296

## **Banded Papers (Strategic Goal #4)**

**A. OBJECTIVE:** To develop procedures for the application of transverse bands to cigarette paper in order to control burn rate by January, 1993.

**B. STATUS ---ISSUES:**

1. Need for new slurry to replace Cellulon for wet-end application.
2. Need to define and overcome causes of cross-web material gradient with moving orifice device.
3. Need to develop alternative materials (polysaccharides) for strategic or product related requirements.
4. Need to determine scale-up options.

**C. PARTICIPATING GROUPS**

PAPER DEVELOPMENT ROGERS, GAUTAM, FLOYD, BALDWIN

## EXPORT PRODUCT DEVELOPMENT

**I. OBJECTIVE:** Strategic Goal 1 Activities - Provide support to operations with respect to existing export products, in the areas of quality cost/productivity, capacity and environmental compliance.

### A. STRATEGIES

1. Product Optimization - Changes to existing export products for the purpose of consolidation of product and material specifications; cost reduction and improvement of product performance.

a. Export Product Standardization

b. L&M/Chesterfield Blend/Flavor Consolidation

c. Development of Softer Response Products for Korea

*→ Tropical  
Filter Redesign  
Result of Formulas  
Prepared  
for Market place /*

2. Filter Optimization - Changes to existing filtration mechanisms for the purpose of reduction of product variability, cost reduction, consolidation of material specifications, and productivity improvement.

a. Carbon Consolidation

b. Qualification of a Porous Combining Wrap

c. Parliament Filter Redesign

d. Support of High-Speed Combiner Development

(PSP)

3. Tar Delivery Reduction - Specification changes to reduce delivery of products in regions where warranted.

a. Lark Japan Family Tar Reduction

b. Marlboro Korea Family Reduction

*→ Early in  
by Monitors  
of program quality  
is coming*

4. Conversion of 80mm Long Size FTB products to 83mm King Size FTB.

1. Marlboro LS to KS Conversion

2. Parliament LS to KS Conversion

*→ As per comp to  
effort to be completed  
in 1993 }  
Equipment  
related }*

5. Packaging Revisions - Track changes in packaging of export products, specifically with respect to printed deliveries and the export warning notice program.

2021385298

**II. OBJECTIVE:** Strategic Goal 2 Activities - Support growth of international business, short term, through the launch of new commercial products and through support of affiliates and licensees.

**A. STRATEGIES:**

1. Product Launches for Japan

- Project 41
- Blend 322
- Marlboro 100 FTB

2. Product Launches for Asia Region

3. Product Launches for EEMA/EEC Regions

4. Support of Marlboro Licensee Production by JT.

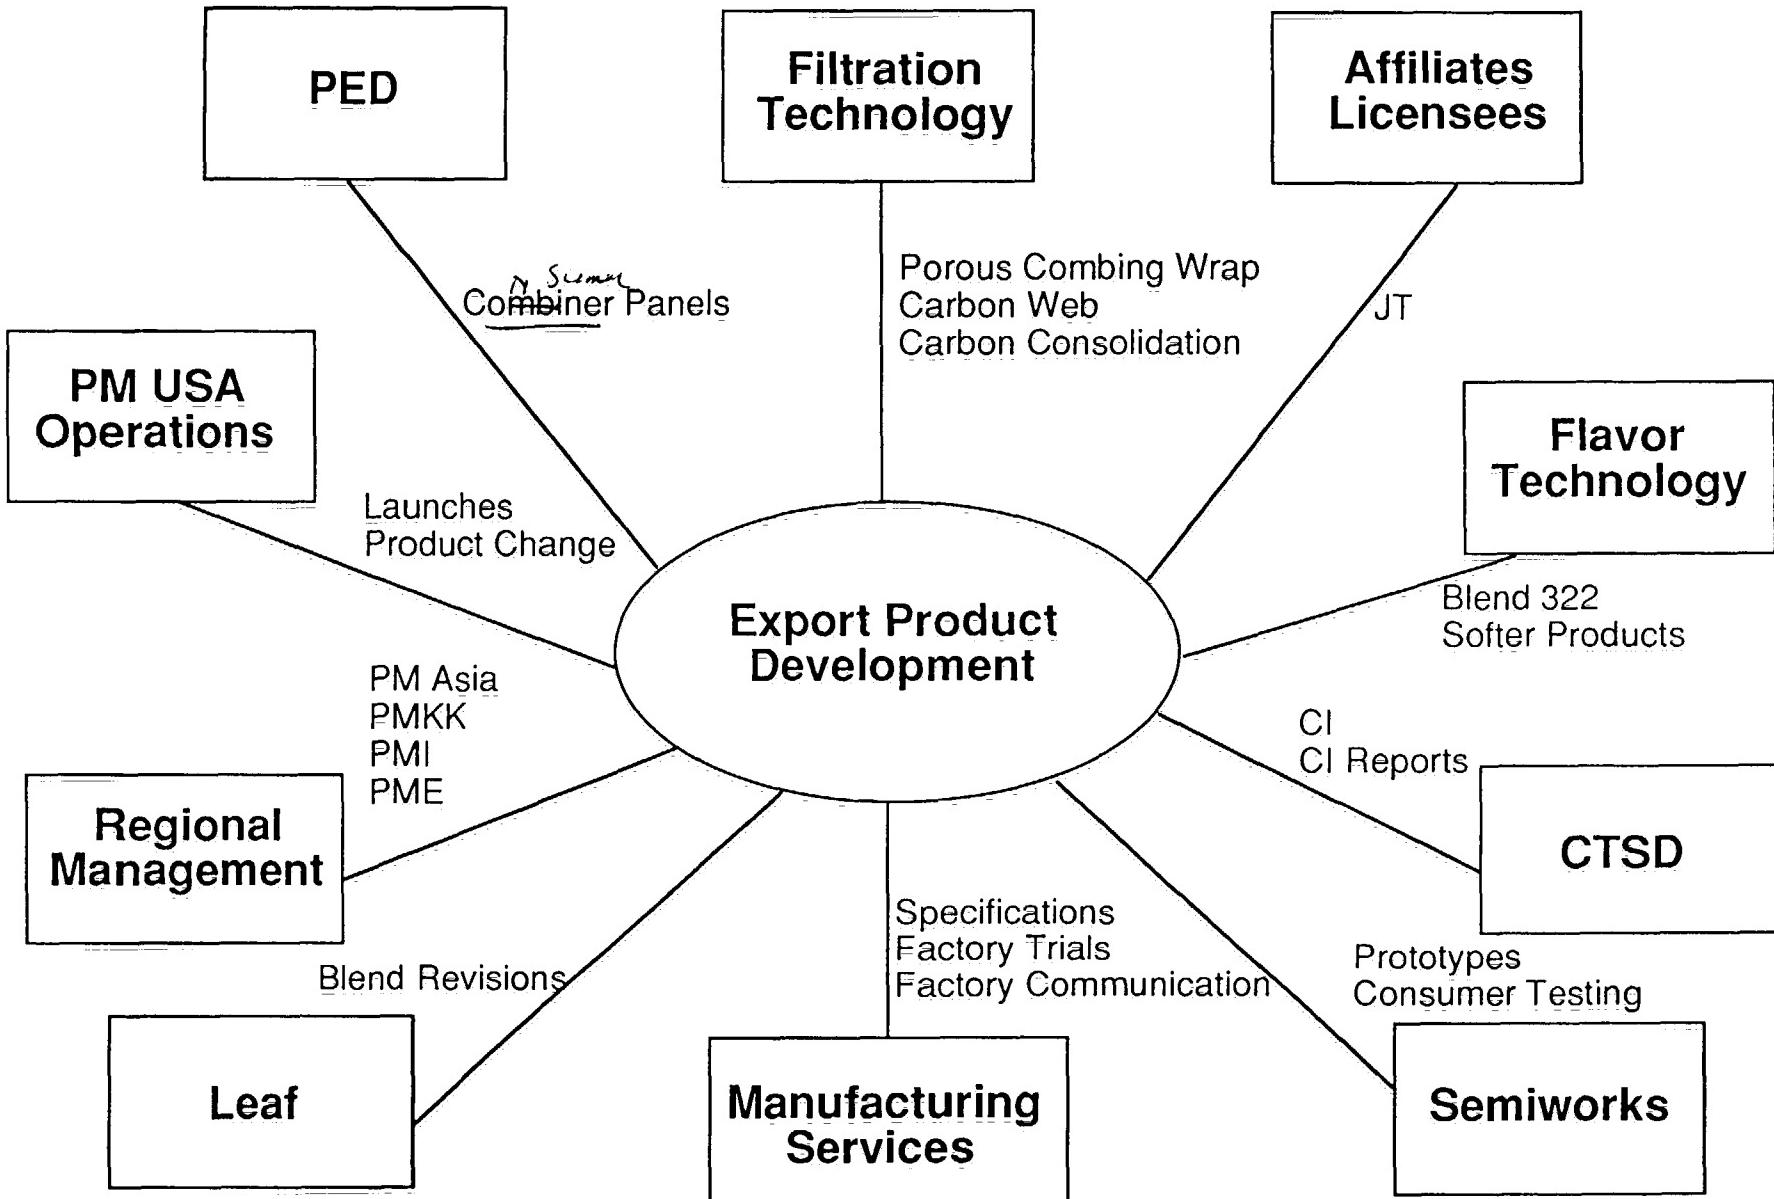

- Factory Location Change
- DIET Inclusion in Marlboro

5. Pan-Asian Menthol

6. Evaluation of New Technologies

- Art
- Ambrosia
- Lotus

2021385299

2021385300

## INTERNATIONAL PRODUCT DEVELOPMENT AFFILIATES AND LICENSEES

- I. **OBJECTIVE:** Contribute to the attainment of Strategic Goal 1 by supporting the existing products of affiliates and licensees.

### **STRATEGIES:**

1. Corporate product improvement (Latin America) - Design changes that standardize (to USA) Latin American products. Assist with consumer testing and implementation.
2. Project Omega - Optimize/standardize the blend and casing/flavor system of the Philippine Marlboro.
3. Project Amethyst - Standardize the casing/flavor system of the European Marlboro.
4. USA Flavor Sourcing - Standardize in phases the casing/flavor system of the Mexican Marlboro (ensuring ingredient compliance). Source all phases from USA.

- II. **OBJECTIVE:** Contribute to the attainment of Strategic Goal 2 by developing products for affiliates and licensees.

### **STRATEGIES:**

1. Corporate Product Development (Latin America) - Develop corporate products for the Latin America Region according to PM USA guidelines.
2. Local Product Development (Latin America) - Develop local products for the Latin America Region according to Regional guidelines.
3. Project 2000 - Begin manufacturing Marlboro in the People's Republic of China in 1995 under a licensee arrangement with CNTC.
4. EEMA BBS - Support EEMA in establishing and monitoring the production of Marlboro and L&M in Hungary, Poland and Yugoslavia.

2021385301

## **DOMESTIC PRODUCT DEVELOPMENT AND SUPPORT FLAVOR TECHNOLOGY PROGRAM**

**PROGRAM COORDINATORS:** Cox/Kroustalis

### **I. INGREDIENT REDUCTION**

#### **A. PROJECT GRAIN**

**Objective:** Reduce the use of alcohol and humectants via reformulation.

1. **Strategy:** Incremental reduction of alcohol in burley top casing.
2. **Strategy:** Reduce alcohol in aftercut in combination with burley top casing alcohol reduction.
3. **Strategy:** Reduce/rearrange PG in the flavor system and combine with the burley top casing and aftercut alcohol reduction.
4. **Strategy:** Remove all alcohol from aftercuts using the sonolator with PG rearrangements in combination with the BTC alcohol reduction.

#### **B. HUMECTANT REDUCTION**

**Objective:** Unify humectant levels in domestic and export RL's and RCB.

1. **Strategy:** Reduce humectant levels in domestic reconstituted tobaccos.

#### **C. MARLBORO RI**

**Objective:** Develop a Marlboro Flavor System containing fewer than 40 listed components which support the subjective character in Marlboro cigarettes.

1. **Strategy:** Develop new reduced ingredient flavor system and subjective evaluation of the blend modifications.
2. **Strategy:** Develop best flavor system with reduced humectants.

2021385302

#### **D. DISCOUNT RI**

**Objective:** Develop a flavor system which is cost effective and has acceptable flavor characteristics on newly developed, cost effective blend and cigarette design.

#### **E. REVISIONS**

**Objectives:** To eliminate unwanted ingredients from the PM direct materials in compliance with legal requirements. To reduce ingredients and simplify sources of materials.

1. **Strategy:** Subjectively evaluate revised flavors and first shipment samples from vendors and determine acceptability.
2. **Strategy:** Identify alternate vendors for current direct materials and subjectively evaluate submissions.
3. **Strategy:** Reduce the number of sole source ingredients and remove unwanted flavor components.
4. **Strategy:** Assist the Flavor Center with subjective evaluations on flavor quality related issues.

## **II. LICORICE**

#### **A. LIQUID LICORICE**

**Objective:** Implement the use of a liquid licorice to replace the existing block licorice in PM formulae which meets Philip Morris requirements of cost effectiveness and product consistency (specifications). The liquid licorice must be subjectively equal to the existing block licorice in PM finished products.

1. **Strategy:** Develop an analytical and subjective database.
2. **Strategy:** Implement cost analysis for all domestic production locations and research the pricing of the product by the vendor.
3. **Strategy:** Implement arrangements for consumer testing.
4. **Strategy:** Determine the feasibility of consolidating spray-dried licorice in export blended strip operations and export dry flavors.

2021385303

## **B. LICORICE REPLACEMENT**

**Objective:** Investigate the development of a non-licorice based licorice substitute for use in all existing and new brands.

## **III. FLAVOR SYSTEM MODIFICATIONS**

### **A. UNCOOKED FLAVOR SYSTEM**

**Objective:** Replace the cooked flavor system for RLTC in anticipation of regulatory changes.

### **B. BURLEY SPRAY SPECIFICATIONS**

**Objective:** Develop Burley Spray specifications for factory primaries.

## **IV. MENTHOL**

### **A. STABLE MENTHOL**

**Objective:** Develop new menthol technology to produce consistent menthol delivery in smoke under normal field conditions.

1. **Strategy:** Evaluate the feasibility of menthol release compounds.
2. **Strategy:** Investigate the feasibility of menthol microencapsulation. *Include HCA*
3. **Strategy:** Investigate the feasibility of menthol encapsulation by calcium alginate.
4. **Strategy:** Investigate menthol-in-dope (MID) for delivery stability.

### **B. PROJECT LEVO**

**Objective:** Develop a menthol product to decrease PM's dependence on natural menthol through the use of synthetic menthol.

2021385364

## V. MISCELLANEOUS

### A. ALTERNATE HUMECTANTS

**Objective:** Produce RL's and RCB with alternate humectants for defensive purposes.

1. **Strategy:** Develop and evaluate alternate humectants replacing propylene glycol and glycerin in PM brands.

### B. SYNTHETIC/NATURAL GLYCERIN AND TRIACETIN

**Objectives:** Establish acceptance specification for natural glycerin based on subjective and analytical criteria. Qualify natural glycerin-based triacetin as filter plasticizer.

1. **Strategy:** Identify trace impurities in natural glycerin and perform subjective evaluations to determine threshold levels of impurities.
2. **Strategy:** Analytically and subjectively evaluate natural glycerin-based triacetin for qualification as a filter plasticizer.

2021385305

**Domestic Product Development & Support  
Existing Product Support**

**PROCESSING PLANT SUPPORT**

**PARK 500**

**OBJECTIVES:** Provide Flavor Technology support to Park 500 for flavor systems and process modifications to address capacity, economic, environmental and overall quality issues.

To subjectively evaluate materials from the Flavor Center which show found-to-show borderline analytical results.

To qualify potential alternate sources of RL to address capacity issues.

**1. Project Work Processes:**

Process Plant (Dry)	Leaf Department (Feedstock)
Flavor Center	Operational Services
Process Development (Process improvements and physicals)

## PROCESSING PLANT SUPPORT

### BL PLANT

**OBJECTIVES:** To increase capacity by increasing line speed at the BL Plant.

To increase the utilization level of mentholated tobacco dust in RCB.

To evaluate unwashed burley stems replacing washed burley stems in RCB to address environmental effluent issues.

To support cooked flavor production and scale-up the reactor at the Flavor Center. To qualify alternate sources for high fructose corn syrup and asparagine.

#### 1. Project Work Processes:

Processing Plant	Leaf Department
Process Development	Flavor Center
Operational Services	

#### 2. a. Intradepartmental Interactions

Process Development	Cigarette Technology
Semiworks	CTRD
ARD	PED

#### b. Interdepartmental Interactions

Leaf Department	Processing Plant (Park 500)
Process	Flavor Center
Environmental	Engineering

#### 3. Priorities: Keep Production going

Production Problems	Flavor Issues
---------------------	---------------

#### 4. Responsible: Swain, Hoskin - Flavor Technology, Process Development;

5. Issues:	Scheduling	Turn around time:
	Domestic vs International	analytical
	Specifications	Cigarette Production
	Humectants	Hold on production materials
	Feedstocks	

2021385307

## **ET/NET**

**OBJECTIVES:** To substitute and evaluate NET materials in existing brands.

**1. Project Work Processes:**

Factories	Leaf Department (Feedstock)
Cigarette Technology	Operational Services
Process Development (Process improvements and physicals)	

**2. a. Intradepartmental Interactions:**

Process Development	Cigarette Technology	Semiworks
CTRDI	ARD	PED

**b. Interdepartmental Interactions:** Leaf Department

**3. Priorities:** Production Problems, Capacity Issues

**4. Responsible:** Swain, Taylor - Flavor Technology, Process Development,

**5. Issues:** Scheduling - Turn around time (analytical, cigarette production, Hold on production materials

Domestic vs International - Specifications (Humectants, Feedstocks)

2021385308

## SUBJECTIVE SUPPORT

**OBJECTIVES:** To provide subjective evaluations (rod and smoking characteristics) of prototypes, modifications of existing brands, new brands and monitoring of competitors' products.

To provide training, maintenance and support to auxiliary panels (e.g., Richmond, Semi-Works, Filter, Paper and Cast Leaf.)

To provide subjective evaluations (rod and smoke characteristics) of development prototypes, modifications of existing brands and monitoring of export (PM and competitors) brands.

### 1. Project Work Processes:

#### a. Factories - problems -

contaminated materials (packaging)  
processing variations  
incorrect flavor systems and casing applications  
incorrect blend formulations  
incorrect packaging materials  
New brand start up

#### b. R&D

POL's  
Subjective Characterization (Competitors)  
Developmental prototypes  
    Triaconin, Filters, Papers  
    Cast Leaf, Flavor Modification  
    Menthol, Solvent/Humectants  
Aging Studies  
Warehouse Studies

#### c. International

New brand start up  
Subjective Characterization (Competitors)  
Developmental prototypes  
External Testing - Danchi/SPC/PMI/etc.  
Distribution Systems Studies  
Export Standardization  
Volatiles Studies  
Aging Studies

2021385309

#### **2. a. Intradepartmental Interactions**

Cigarette Technology  
Flavor Technology (analytical and panels)  
ARD  
CTSD

**b. Interdepartmental Interactions**

### **3. Priorities:** Different for each Department

**4. Responsible:** Willis, Garrett, and Hale - Flavor Technology, Cigarette Technology

## **5. Issues: HOW DOES IT SMOKE**

Lack of clear objectives  
OV's, Spotting, Staining, vs SUBJECTIVES

2021385312

## Domestic Product Development & Support Existing Product Support

PROGRAM COORDINATORS: R. Cox, V. Willis, G. Yatrakis

### A. ET/NET Product Inclusion

Objective: To substitute and evaluate NET materials in existing brands.

Strategy: Evaluate the substitution of NET processed #10 bright for DETA and incremental replacement of bright.

Strategy: Evaluate models that incorporate NET processed BLDET, burley and bright in various brands initially at current rates. The qualification of increased levels of NET materials in the various blends will be done on a secondary basis. Merit, Merit Ultra Lights, and Marlboro will be evaluated first.

Strategy: Evaluate models replacing DETA with BLDET at various levels in major brands..

### B. CIGARETTE MANUFACTURING O.V.

Objective: Determine appropriate O.V. for cigarette manufacturing.

Strategy: Recommend appropriate adjustment to 24-hour pack O.V. targets and Tropical Filler targets.

Strategy: Propose O.V. manufacturing O.V. targets based on equilibrated O.V. 's of tobacco; composition of O.V.'s, factory conditions and effects of packaging materials.

More detailed info

### C. PED PRODUCT QUALITY PROJECT.

Objective: Define and measure the determinants of consumers' perceptions of quality

Strategy: Conduct consumer surveys to rank cigarette defects with respect to their importance to consumers and consumers' awareness of them.

2021385313

Strategy: Analyze taste/odor/stale complaints to relate their frequencies to brand and smoker group characteristics - 2nd Qtr.

Strategy: Conduct surveys of complainants about TOS and other defects - 2nd Qtr.

#### D. PACKAGING STUDIES:

Objective: Qualify a supplier of waterborne printing ink.

Strategy: Establish a partnership with an ink company committed to waterborne inks.

Strategy: Develop an analytical method for the quantitation of the solvent components used in waterborne ink systems. Investigate the feasibility of static absorption by activated carbon in collecting residual solvent components of printed packaging material.

Objective: Develop a working database for Packaging Studies.

Strategy: Supply Computer Applications Division (CAD) with information needed to meet our computer needs.

Objective: Revise and update threshold and specification levels for gravure solvents as solvent mixtures used on printed packaging material changes.

Strategy: Determine threshold levels on various printing solvents which may be used on press.

Objective: Evaluate new package concepts for feasibility in the marketplace.

Strategy: Determine if pre-applied adhesive can be used successfully on cut labels.

Objective: Determine the effects of high barrier film on our product.

Strategy: Develop an analytical technique which will determine the barrier properties of overwraps, current and developmental.

Strategy: Determine the impact of the improved sealant layer developed by Hoechst for their high barrier OPP films on pack seal efficiency. Determine the impact of the Hoechst film on the product's ability to maintain targeted

2021385314

moisture levels in the desert and jungle rooms. Perform a preliminary subjective test to qualify the Hoechst High Barrier films.

**Objective:** Determine if products with Flavorseal packaging maintains their physical, chemical and subjective properties longer than products with polypropylene overwrap.

**Strategy:** Compare the polypropylene overwrap with the Flavorseal overwrap for the Winston and Winston Lights 100's SP and Salem and Salem Lights 100's SP.

## E. FACTORY MODERNIZATION SUPPORT.

**Objective:** To provide support for the subjective qualification of factory primary modernization programs.

**Strategy:** Qualify the new MZM export strip operation at McKinney, VA.

**Strategy:** Qualify new P & S Dryer at the MC.

**Strategy:** Replace new dryer at single rate.

**Strategy:** Replace and qualify A/C cylinder at the MC.

**Strategy:** Qualify two new bulk alcohol storage tanks at M/C.

**Strategy:** Qualify Direct Cylinder Conditioning at Cabarrus.

**Strategy:** Qualify reconditioned S-2 CO<sub>2</sub> storage tank at M/C.

**Strategy:** Qualify DIET stem reclamation from the VT separator.

**Objective:** Evaluate and modify Semi-Works Small Scale to achieve parity with Large Scale.

**Strategy:** Small Scale Processing will continue to be used as a screening tool to reduce the number of samples requested for large scale processing.

**Strategy:** Establish operating procedures and processing parameters for the new equipment.

2021385315

**Strategy:** Examine the individual processing steps and strive to understand and minimize the differences between Large Scale and Small Scale.

## F. TOBACCO MATERIALS AND RECLAMATION.

**Objective:** Subjectively evaluate returned goods and/or out of specification filler to determine most cost effective disposition

**Strategy:** Determine most cost effective disposition (riper, expanded, sheet products) of filler while maintaining subjective integrity.

## G. PROCESSING PLANT SUPPORT.

**Objective:** Provide Flavor Technology support to Park 500 for flavor systems and process modifications to address capacity, economic, environmental and overall quality issues.

**Strategy:** Provide support for the evaluation of by-products utilization at Park 500.

**Strategy:** Develop and evaluate alternate denitration options with Process Development through separate Burley stem processing.

**Objective:** To subjectively evaluate materials from the Flavor Center which show found to show borderline analytical results.

**Strategy:** Analytically and/or subjectively evaluate suspect materials submitted through Operations Services from the Flavor Center.

**Objective:** To qualify potential alternate sources of RL to address capacity issues.

**Strategy:** Develop and evaluate alternate(Jobbers) sources of RL with the RLTC flavor system to address long term capacity and European sourcing issues.

**Objective:** To increase capacity by increasing line speed at the BL Plant.

**Strategy:** Conduct a dryer study to determine the temperature profiles for the existing line at the BL plant in order to predict dryer temperature profiles needed at 350 fpm.

2021385316

**Objective:** Develop a liquid flavor system to replace dry flavors in RCB while maintaining subjective parity.

**Strategy:** Implementation will be supported by the preparation of drums of 75-700 at the Flavor Center and personnel will monitor the initial startup. Initial RCB (100%) cigarettes will be subjectively evaluated by members of Group 2305.

**Objective:** To increase the utilization level of mentholated tobacco dust in RCB.

**Strategy:** Request trials of the elevated levels of Class 6 in Cast Leaf Pilot Plant prior to production trials.

**Objective:** To evaluate unwashed burley stems replacing washed burley stems in RCB to address environmental effluent issues.

**Strategy:** Subjectively qualify unwashed burley stems in production RCB.

**Objective:** To support cooked flavor production and scale-up the reactor at the Flavor Center. To qualify alternate sources for high fructose corn syrup and asparagine.

**Strategy:** Flavor Technology personnel will support these goals through collaborations with Operations Services, Engineering, Purchasing and Flavor Center personnel to formulate with the alternate materials and evaluate 75-814 from the improved reactor system.

## H. SUBJECTIVE PANELS.

**Objective:** To provide subjective evaluations (rod and smoking characteristics) of prototypes, modifications of existing brands, new brands and monitoring of competitors' products.

**Strategy:** Conduct evaluations on development programs, monitoring of domestic competitive brands and any problems associated with production and/or processing plants.

**Objective:** To provide training, maintenance and support to auxiliary panels (e.g., Richmond, Semi-Works, filter, paper and Cast Leaf.)

2021385317

**Strategy:** Train auxiliary panels to screen development prototypes and to judge acceptability of final products.

**Objective:** To provide subjective evaluations (rod and smoke characteristics) of development prototypes, modifications of existing brands and monitoring of export (PM and competitors) brands.

**Strategy:** Continue to monitor existing brands and provide subjective evaluations in prototype development. Further training will be conducted to standardize panel.

## I. MARLBORO STANDARDIZATION.

**Objective:** To identify and reduce sources of variations in PM brands between production and processing facilities.

**Strategy:** Conduct factory pickups and a standard run to monitor the quality of Marlboro by subjective and analytical testing.

**Objective:** Provide training, maintenance and support to factory panels which could possibly identify and reduce sources of taste/odor/stale customer complaints.

**Strategy:** Training for factory panels and quarterly panel leader workshops will be conducted. The factory panels will monitor their daily production which could identify and possibly reduce taste/odor/stale customer complaints. Factory panels will also evaluate factory pickups and Standard Run X for monitoring purposes.

**Objective:** Subjectively test externally (POL testing) Marlboro product from different production locations.

**Strategy:** POL testing (monadic evaluation) of scheduled factory pickups and cigarettes produced from Standard Run X. This will aid in defining Marlboro control regions and provide continuous monitoring of the different factories.

2021385318

## J. CIGARETTE STORAGE/TRANSPORTATION/SHIPPING STUDY

**Objective:** Define the impact of cycling temperature and humidity typically seen within shipping containers and the effects of heating and cooling cycles on product discoloration, staining, subjectives, and analyticals.

**Strategy:** Subjectively evaluate the fifteen models that were shipped to KGF and returned to Richmond without being exposed to the simulated study with cycling temperature and humidity conditions. Evaluate each of the models from the scheduled acquisitions of the simulated study and compare them to the control to determine when and how the subjective effects of the products changed.

**Strategy:** Repeat the testing in Strategy #1 with specified models and conditions for the Export Product Standardization - Singapore and the GCC Study to determine the effects of cycling temperature and humidity conditions in the shipping containers. Conditions, based on previous data, will be simulated in a controlled environmental chamber.

**Objective:** Determine the impact of adverse environmental conditions upon the subjective character and analytical specifications of finished products. Compare the results of this study with similar studies conducted using products with carbon filters.

**Strategy:** Environmental testing with subjective and analytical tracing to determine the effect of subjectives and flavor at adverse conditions.

**Objective:** Determine the subjective and analytical changes in products with carbon in filters which occur under various conditions with age.

**Strategy:** Environmental testing with subjective and analytical tracing to determine the effects of subjectives and flavor at adverse conditions

## **STRATEGIC GOAL 2**

### **Product Development**

#### **A. Premium Brands**

**Objective:** Identify and develop logical line extensions and repositioning of existing products to fill unaddressed opportunities and to address changing market opportunities.

B&H Line Extensions  
Merit Ultima  
3mg Merit  
6mg Merit  
Va. Slims K.S.  
Va. Slims 100's Lights 50% VSS Reduction  
Va. Slims Superslims @ 9mg  
Parliament Lights Menthol

#### **B. Marlboro**

**Objective:** To identify and develop appropriately positioned line extensions for the family of products, reposition existing products and modify products to suit business needs.

Marlboro Medium 100's  
Marlboro Blend Study  
Marlboro/Marlboro Lights Positioning  
Marlboro Extra Lights  
Marlboro Wides

#### **C. Discount Brands**

**Objective:** To develop discount brands that satisfy unaddressed market opportunities; to make discount brands more cost effective.

Alpine  
Bucks  
Slims 100  
Full Flavor Menthol

2021385335

#### **D. Marketing Support Program**

**Objective:** To support Marketing and Marketing Research efforts in the areas of focus groups, ad packs and packaging concept tests. To provide cigarette prototypes, special packagings and product information necessary to assess feasibility of concepts.

1. Pack Odor Blotters
2. B&H Ad Pack
3. Circumference, length variations for Marlboro Wide Program.
4. Ring tipped menthol products for focus group testing.

#### **E. Consumer Testing**

**Objective:** Generate a database of strength and liking scores for PM and competitors' products to identify new product opportunities and product/process improvements.

Global Monadics  
Marlboro Monadics  
"Special" Monadic Testing

2021385336

## **STATEGIC GOAL 3**

### **A. Low Tar High Flavor**

**Objective:** Develop new technologies which will allow, within the next two to four years "Ultra Low" tar 2-4mg cigarettes with sensorial experience of "Lights" or full flavored cigarettes.

Preliminary Meetings

### **B. Project Art**

**Objective:** Develop subjectively acceptable products with a significant reduction in nicotine delivery from filler which through supercritical CO<sub>2</sub> extraction, has a reduction in nicotine content.

Half Nic  
DeNic

### **C. Project Ambrosia**

**Objective:** Develop Ambrosia I products with modified vanilla-type odor. Develop Ambrosia products with low smoke, low odor, and low smoke/low odor.

Ambrosia I  
Ambrosia II

### **D. Consumer Testing Internal**

**Objective:** To improve sensory testing guidance by developing new procedures and stream-lining existing procedures and by increasing our knowledge affecting blind sensory test results.

Evaluate Current Panels  
Data Presentation  
Develop New Test Methods

### **E. Consumer Research (Added Value)**

Plans not approved

2021385337

#### **F. New Packaging Concepts/Added Value**

**Objective:** Provide support services to customers in the following areas: New York Marketing, Domestic and International Product Development, Filter Technology, Paper Technology, Engineering Packaging Group, Flavor Technology Packaging Group, and Semiworks. The services provided are necessary to assist in the design and fabrication of materials, components, and machinery for the timely and efficient assessment of new and novel packaging and paper designs.

ex: Circumferences  
Cigarette Lengths  
Filter Lengths

#### **G. Computer Application**

**Objective:** Design and implement an integrated modelling and database management system for product development.

Semiworks Request  
Specifications  
Design Model

2021385338

PHILIP MORRIS U.S.A.  
INTER OFFICE CORRESPONDENCE  
Richmond, Virginia

To: Those Listed *D. Leyden* Date: February 28, 1992  
From: D. Leyden  
Subject: 1992 R&D Operational Plan

Attached is the 1992 R&D Operational Plan. The contents are essentially those submitted to me by the Program Coordinators. Please review these with special attention to those R&D Programs which fall under your directorate. The Program Coordinators should submit any revisions to me by March 16, 1992.

## **OPERATIONAL PLANS**

### **DOMESTIC PRODUCT DEVELOPMENT**

**1992**

**2021385351**

DOMESTIC PRODUCT DEVELOPMENT AND SUPPORT PROGRAMS

1) Product Development

A. Premium Brands

B&H

Merit

Virginia Slims

Parliament

Marlboro

Discount Brands

Marketing Program Support  
(Players Navy Cut (?))

No Plans

Consumer Testing

The above program, we feel, should be in Strategic Goal #2.

2021385352

A. PREMIUM BRANDS

B&H KS LINE EXTENSION

- I. Objective: Design and develop a B&H King Size Menthol and Regular Full Flavor and Lights
- II. Explanatory Introduction: Expand market potential for B&H KS Menthol to 60% of population that prefers KS, specifically to appeal to younger blacks (90% of which smoke menthol).

III. Strategies:

Strategy I: Develop and design prototypes

- A. Initial prototype design January 1991
- B. Prototype production January 1991
- C. Prototype analytical testing February 1991

Strategy II: Investigate menthol blend MB4B vs. B&H Menthol

- A. Design and produce prototypes 2nd Quarter 1991
- B. Tar/menthol interaction POL's 2nd Quarter 1991
- C. Blend decision 3rd Quarter 1991

Strategy III: Test designs and blends

- A. Baseline regular/menthol POL's 3rd Quarter 1991
- B. Adpack campaign 4th Quarter 1991
- C. Specifications drafted 1st Quarter 1992
- D. Extended use trial 1st Quarter 1992
- E. Factory trials March 1992
- F. Second Adpack March 1992

2021385353

Strategy IV: Redesign and develop a light menthol prototype with a higher tar/puff and menthol/puff to appeal to full flavor menthol smokers (Newport, Kool, and Salem)

A. Initial prototype design	January 1992
B. POL production	February 1992
C. POL analytical testing	February 1992
D. Ship POL	February 1992

Strategy V: Launch

A. Factory start-up	April 1992
B. CPC approval	April 1992
C. National launch	September 1992

Strategy VI: Net inclusion -- driven by NET Program timetable

IV. Resource Allocations:

Warren Claflin	Technical Advisor
Morris White	Domestic Product Development
Howard Maxwell	Flavor Technology
Truman Foster	Commercial Development
Bill Geiszler	Paper Technology
Greg Patron	Filter Technology
Debbie Atkinson	POL Administration, DPD
Mable Fleming	PED
Duane Wilder	Engineering
Mark Guy	Engineering
Steve Walton	Production
Bill Atkins	Production
Sainta Haywood	Operation Services
Terry Burgess	Operation Services
Kevin Thompson	Operation Services

V. Potential Projects

- B&H KS Ultra Lights
- B&H Medium
- LS/LO and Value Added

2021385354

## MERIT ULTIMA

I. Objective: Support Merit Ultima launch

II. Explanatory Introduction: The full margin products have been developed for National launch on February 17. The products offer more mainstream taste in the ultra low tar deliveries. (1mg KS/2mg 100's)

### III. Strategies:

Strategy I: Identify and resolve filter production challenges

A. On-site inspection of production processes 1st Quarter 1992

B. Recommendations 1st Quarter 1992

### III. Resource Allocations:

Warren Claflin	Technical Advisor
Barbara Monahan	Domestic Product Development
Charlie Altizer	Domestic Product Development
Janet Spruill	Domestic Product Development
Morris White	Domestic Product Development
Susan Wagner	Cabarrus, Production
Jim Pflueger	Flavor Development
Don Laslie	Filter Development

### IV. Potential Projects

- Merit Ultima Menthol
- Low sidestream/low aroma

2021385355

**3mg MERIT**

- I. **Objective:** Design and develop a 3mg product with the subjective attributes of a 6mg cigarette.
- II. **Explanatory Introduction:** The Merit Ultra Light product needs revitalization with an added benefit. The benefit identified is equal taste at 3mgs tar to the existing 5mg tar Ultra Lights.

**III. Strategies:**

**Strategy I:** Design and develop initial prototypes using conventional materials

- A. Prototype modelling 1st Quarter 1992
- B. Prototype production 2nd Quarter 1992
- C. Prototype analytical testing 2nd Quarter 1992
- D. Internal subjective testing 2nd Quarter 1992

**Strategy II:** Design and develop prototypes using new and/or novel components

- A. Blend Development 2nd Quarter 1992
- B. Filter Development 2nd Quarter 1992
- C. Paper Development 2nd Quarter 1992
- D. Prototype production 3rd Quarter 1992

**Strategy III:** Evaluate prototypes

- A. Baseline POL production 3rd Quarter 1992
- B. Internal testing 3rd Quarter 1992
- C. Monadic POL testing 4th Quarter 1992
- D. Pair comparison testing 4th Quarter 1992

2021385356

Strategy IV: Net inclusion -- driven by NET Program timetable.

IV. Resource Allocations:

Warren Claflin	Technical Advisor
Charlie Altizer	Domestic Product Development
Morris White	Domestic Product Development
Jim Pflueger	Flavor Technology
Bill Geiszler	Paper Technology
Don Laslie	Filter Technology
Billy Riggan	Leaf

V. Potential Projects

- 3mg Merit Menthol
- Low sidestream/low aroma and value added

2021385357

6mg MERIT

- I. Objective: Design and develop a 6mg product with the subjective attributes of a 8mg cigarette.
- II. Explanatory Introduction: The 8mg flavor low Merit needs revitalization with an added benefit. The benefit identified is equal taste at 8mg as at 6mg.

III. Strategies:

Strategy I: Design and develop initial prototypes using conventional materials

- |                                 |                  |
|---------------------------------|------------------|
| A. Prototype modelling          | 1st Quarter 1992 |
| B. Prototype production         | 2nd Quarter 1992 |
| C. Prototype analytical testing | 2nd Quarter 1992 |
| D. Internal subjective testing  | 2nd Quarter 1992 |

Strategy II: Design and develop prototypes using new and/or novel components

- |                          |                  |
|--------------------------|------------------|
| A. Blend investigations  | 2nd Quarter 1992 |
| B. Filter investigations | 2nd Quarter 1992 |
| C. Paper investigations  | 2nd Quarter 1992 |
| D. Prototype production  | 3rd Quarter 1992 |

Strategy III: Evaluate prototypes

- |                            |                  |
|----------------------------|------------------|
| A. Baseline POL production | 3rd Quarter 1992 |
| B. Internal testing        | 3rd Quarter 1992 |
| C. Monadic POL testing     | 4th Quarter 1992 |
| D. Pair comparison testing | 4th Quarter 1992 |

2021385358

Strategy IV: Net inclusion -- driven by NET Program timetable.

**IV. Resource Allocations:**

Warren Claflin	Technical Advisor
Charlie Altizer	Domestic Product Development
Morris White	Domestic Product Development
Jim Pflueger	Flavor Technology
Bill Geiszler	Paper Technology
Don Laslie	Filter Technology
Billy Riggan	Leaf

**V. Potential Projects**

6mg Merit Menthol

Low sidestream/low aroma and value added

2021385359

## VIRGINIA SLIMS KING SIZE

- I. Objective: Design and develop Virginia Slims King Size, Regular and Menthol line extensions
- II. Explanatory Introduction: Virginia Slims 100's smokers have become older. Young smokers are not entering the brand. The King Size products with social benefit have been identified as a possible way to attract young smokers while not loosing those currently attracted by 100's.

### III. Strategies:

Strategy I: Develop and design prototypes at 24.0 circumference

- A. Initial prototype design February 1992
- B. Prototype production February 1992
- C. Prototype analytical testing March 1992
- D. Evaluate alternate blends/flavors March/April 1992
- E. Generic prototypes (generic program) 1st Quarter 1992

Strategy II: Develop paper specifications needed to achieve both a 9mg to 11mg LSS product, driven by taste equal to 11mg tar

- A. Design and produce prototypes 1st Quarter 1992
- B. Determine commercialization of specified paper 2nd Quarter 1992

Strategy III: Evaluate application methods for GEV to the cigarette paper

- A. Develop specifications for GEV September 1992
- B. Develop specifications for GEV added to the rod seam adhesive November 1992
- C. Modify unit to apply adhesive uniformly November 1992
- D. Investigate coating cigarette paper with GEV September 1992

2021385360

IV. Resource Allocations:

Linda Wettle	Domestic Product Development
Jim Pflueger	Flavor Technology
Barbro Goodman	Paper Technology
Ray Jones	Operations Services
Pete Talley	Engineering
Arlington Finley	Filter Development
A.. Manwaring	PED
P.. Callaham	

2021385361

VIRGINIA SLIMS SUPERSLIMS

- I. **Objective:** Design and develop a 9mg Virginia Slims Superslims regular and menthol
- II. **Explanatory Introduction:** Based on information to date, the VSSS at 6mg tar using low sidestream cigarette paper is rated stronger than Capri at 9-10mg tar. Low sidestream cigarette paper gives a higher strength perception. It is not recommended that the current product be increased in tar since the increased tar would move the VSSS product further away in sensorial perception from Capri.

III. **Strategies:**

Strategy I: Develop and design prototypes

- A. Initial prototype production October 1991
- B. Prototype production December 1991
- C. Prototype analytical testing January 1992

Strategy II: Develop paper specifications needed to achieve 9mg product (LSS)

- A. Design and produce prototypes with current available papers 1st Quarter 1992
- B. Specify and commercialize paper 2nd Quarter 1992

Strategy III: Determine filter and ventilation changes necessary to achieve a 9mg product

- A. Design and produce prototypes 2nd Quarter 1992

Strategy IV: Consumer testing

- A. POL testing June 1992

2021385362

IV. Resource Allocations:

Linda Wettle	Domestic Product Development
Barbro Goodman	Paper Technology
Arlington Finley	Filter Technology
Ray Jones	Operations Services
Jim Pflueger	Flavor Development
Armine Manwaring	PED

V. Potential Projects:

- Prototypes produced with conventional blends, i.e., Marlboro and B&H Lights -- June 1991
- Prototypes produced with conventional papers and blends -- December 1991
- Cost effective charcoal filter for export

2021385363

PARLIAMENT LIGHTS MENTHOL

I. Objective: Develop a 9.0mg tar Parliament Lights Menthol LS FTB, 10's LS FTB, and 100's SP product for Region I test market to compete with Newport Lights.

II. Explanatory Introduction: Expand appeal for Parliament with recessed filters for approximately 28% of smokers in Region I who prefer menthol. Newport Lights is major competitor. Parliament is strong in Region I. Region I is also a strong menthol and box market.

III. Strategies:

Strategy I: Develop and design prototypes

- |                                    |           |
|------------------------------------|-----------|
| A. Research Newport Lights         | July 1991 |
| B. Produce prototypes in Semiworks | July 1991 |
| C. Prototype analytical testing    | July 1991 |

Strategy II: Refine prototype design

- |                                                            |                  |
|------------------------------------------------------------|------------------|
| A. Redesign prototype to reflect size change from LS to KS | 1st Quarter 1992 |
| B. Refine menthol levels                                   | 1st Quarter 1992 |
| C. Factory trial                                           | 2nd Quarter 1992 |
| D. Trial analytical testing                                | 2nd Quarter 1992 |
| E. Specifications                                          | 3rd Quarter 1992 |

Strategy III: Launch

- |                        |                  |
|------------------------|------------------|
| A. CPC approval        | 4th Quarter 1992 |
| B. Production start-up | 4th Quarter 1992 |
| C. Region I Launch     | 1st Quarter 1993 |

2021385364

**IV. Resource Allocations:**

Warren Claflin	Technical Advisor
Morris White	Domestic Product Development
Tom Gannon	Flavor Technology
Judy Ryder	Filter Technology
Bill Geiszler	Paper Technology
Terry Burgess	Operation Services
Jack Horne	Operation Services
Kevin Thompson	Operation Services
Bill Atkins	Production
Bill Wray	Engineering
Charlie Hansen	Engineering

**V. Potential Projects**

- Parliament FF Menthol

2021385365

B. MARLBORO

MARLBORO

- I. **Objective:** Implement cost effective modifications to the current packings. Extend the Marlboro family line with logically timed and positioned products as determined by market strategies.
- II. **Explanatory Introduction:** Elevate the brands income, share, and volume by providing line extensions in tar positions appropriate to meet PM and competitive needs. Product effective issues for full margin brands include initiatives to adjust blend components and incorporate technological improvements for advancing the quality of the family both in manufacturing and in the market place.

MARLBORO MEDIUM 100's

- I. **Objective:** Develop 100mm line extension of MF Medium KS delivering similar sensory response to the KS product. Position product sensorially between Marlboro Lts and Marlboro Gold Full Flavor.

III. **Strategies:**

Strategy I: Develop and design prototypes

A.	12mg tar/9.0 puffs	Complete
	• Design/prototypes	
	• Consumer testing	
	• Specifications	
B.	<13.5 tar/10.0 puffs	February 1992
	• Design	February 1992
	• POL production	February 1992
	• Specifications	
C.	14.0 tar/10.0 puffs	February 1992
	• Design	February 1992
	• Prototypes	
D.	Product Decision	February/March 1992

2021385366

Strategy III: Factory trials for national launch

A. 100mm soft pack/box products March 1992

#### Strategy III: National launch

A. Production start-up	April 1992
B. Launch	June 1992

#### Strategy IV: Net Inclusion

- A. Net incorporation as dictated by timeframe of the NET program TBD
- B. National launch TBD

#### IV. Resource Allocations:

J. Spruill/M. White	Domestic Product Development
R. Newsome	Filter Technology
M. Garrett	Flavor Development
B. Joyner	PED

2021385367

MARLBORO/MARLBORO LIGHTS

I. **Objective:** Design and implement blend modification studies for component reformulation, off-shore removal and incorporation of higher levels of expanded material.

II. **Explanatory Introduction:**

III. **Strategies:**

Strategy I: ESB reformulation/off-shore removal

- |                      |          |
|----------------------|----------|
| A. Design/prototypes | Complete |
| B. POL testing       | Complete |

Strategy II: Design and develop prototypes incorporating component reformulations including higher expanded levels.

- |                                        |                  |
|----------------------------------------|------------------|
| A. Prototype production                | February 1992    |
| B. Evaluations - analytical/subjective | March 1992       |
| C. POL testing                         | 2nd Quarter 1992 |
| D. Refinements                         | 3rd Quarter 1992 |
| E. Implementation                      | As Directed      |

Strategy III: NET Inclusion

- A. Net incorporation as available by timeframe of NET Program.

IV. **Resource Allocations:**

- |              |                              |
|--------------|------------------------------|
| J. Spruill   | Domestic Product Development |
| M. Garrett   | Flavor Development           |
| A. Manwaring | PED                          |
| R. Keatts    | Leaf Department              |

2021385368

## MARLBORO EXTRA LIGHTS

I. **Objective:** Develop line extension which delivers 1.1-1.2 tar/puff at 8.0-9.0mg tar.

### III. Explanatory Introduction:

### III. Strategies:

#### Strategy I: Design and develop prototypes

A. Design/prototypes	Complete
B. Consumer testing	Complete
C. Specifications	Complete
D. Factory trial	Complete

#### Strategy II: Net inclusion

A. Net incorporation as available by timeframe	3rd Quarter 1992
------------------------------------------------	------------------

#### Strategy III: Status

A. Shelf item	Available
---------------	-----------

### IV. Resource Allocations:

W. Claflin	Technical Advisor
B. Hendricks	Domestic Product Development
M. Garrett	Flavor Development
A. Manwaring	PED
B. Riggan	Leaf Department
R. Jones	Operations Services

### V. Potential Projects

- MF Extra Lights Menthol KS/100's
- MF Extra Lights 100mm Regular

2021.385369

## MARLBORO ULTRA LIGHTS

I. Objective: Develop 6mg line extension in KS and 100's providing enhanced subjective quality and Marlboro character.

II. Explanatory Introduction:

III. Strategies:

Strategy I: Design, develop, and implement line extension (6mg)

A. Factory trial/specifications	February 1989
B. Test market introduction Red pack/cork tipping Blue pack/white tipping	May 1989
C. Added test market introduction Red pack/white tipping	October 1989
D. Specifications	Complete

Strategy II: Test market monitoring

A. Ongoing	1992
------------	------

Strategy III: Net Inclusion

A. Net incorporation as available by timeframe of the NET program
-------------------------------------------------------------------

IV. Resource Allocations:

B. Hendricks/J. Spruill	Domestic Product Development
M. Garrett	Flavor Development
R. Keatts	Leaf Department
E. Weston	Operations Services

V. Potential Projects

- Menthol Companions

2021385370

## MARLBORO WIDES

- I. Objective: Develope KS 80/83mm full flavor/lights products at an increased circumference
- II. Explanatory Introduction: Camel Box full flavor/lights wides have been introduced. To capitalize on this opportunity to provide more (27.0mm circumference) to the consumer, steps have been initiated to investigate existing blends, construction parameters, and packaging to add benefits in excess of competition and to deliver product in a timely fashion.

### III. Strategies:

Strategy I: Model configurations/produce prototypes in 80/83mm length utilizing Marlboro, Bucks, Bristol blends

- |                           |                     |
|---------------------------|---------------------|
| A. Design Models          | February 1992       |
| B. NTM designated/ordered | February 1992       |
| C. Prototype production   | February/March 1992 |
| D. Analytical/Subjective  | February/March 1992 |

Strategy II: Address issues necessary to accommodate R&D and production concerns

- |               |                  |
|---------------|------------------|
| A. Processing | 1st Quarter 1992 |
| • CPI         |                  |
| • Blends      |                  |
| • OV's/CV's   |                  |
| • Loose ends  |                  |
| B. NTM        | 1st Quarter 1992 |
| • Paper       |                  |
| • Filters     |                  |
| C. Equipment  | 1st Quarter 1992 |
| • Makers      |                  |
| • Packers     |                  |
| • Cartons     |                  |

2021385371

Strategy III: Consumer testing definitions

- How/Whys?
- Product definition (FF/Lts, etc.)
- Types
- Market I.D.

1st/2nd Quarter 1992

Strategy IV: Test market/launch to be evaluated

IV. Resource Allocations:

D. Newman	Domestic Product Development
J. Spruill	Domestic Product Development
W. Claflin	Domestic Product Development
M. Garrett	Flavor Development
R. Newsome	Filter Development
E. Woolridge	Engineering
B. Goodman	Paper Development

V. Potential Projects

- Wides in different lengths and delivery categories

2021385372

C. DISCOUNT BRANDS

ALPINE

- I. **Objective:** To determine what modifications, if any, are necessary to enhance the performance of the product in the market place.
- II. **Explanatory Introduction:** Previous consumer testing, both Alpine king size and 100's has shown no significant subjective differences from Salem among full flavor smokers. The data base indicates that there is no product problem.

III. **Strategies:**

Strategy I: Consumer testing

- |                                   |               |
|-----------------------------------|---------------|
| A. POL 04010 Alpine FF, KS, SP    | February 1992 |
| B. POL 04009 Alpine Lts, KS, SP   | March 1992    |
| C. POL 0690 Alpine Lts, 100's, SP | February 1992 |

IV. **Resource Allocations:**

- |            |                              |
|------------|------------------------------|
| B. Monahan | Domestic Product Development |
| M. Fleming | PED                          |

2021385373

## BUCKS

- I. **Objective:** Design and develop line extensions for Bucks.
- II. **Explanatory Introduction:** Bucks was initially represented in the market place with full flavor and lights KS. Fill voids in the product family. These products are being developed to take advantage of Bucks' name, in extending the family, and to further advise the increasing generic market.

III. **Strategies:**

**Strategy I:** Develop and design prototypes

- |                                 |                |
|---------------------------------|----------------|
| A. Initial prototype design     | September 1991 |
| B. Prototype production         | September 1991 |
| C. Prototype analytical testing | October 1991   |

**Strategy II:** Implement aftercut modification on all line extensions for Bucks

A. Design and produce the following prototypes with new aftercut:

Bucks 100 Lights	1st Quarter 1992
Bucks 100 Ultra Lights	1st Quarter 1992
Bucks 100 Full Flavor	1st Quarter 1992
Bucks 100 Lights	1st Quarter 1992
Bucks KS Menthol Full Flavor	1st Quarter 1992
Bucks KS Menthol Lights	1st Quarter 1992
Bucks Full Flavor 83mm	1st Quarter 1992

B. POL testing

Bucks 100 Full Flavor	April 1992
Bucks 100 Lights	May 1992

2021385374

Strategy III: Complete specifications and factory trials with packaging.

- A. Determine viable launch schedule TBD
- B. Packaging approval TBD
- C. Schedule factory trial TBD
- D. Final specifications and CPD approval TBD

IV. Resource Allocations:

Buddy Peace	Cigarette Technology
Warren Claflin	Technical Advisor
George Yatrakis	Flavor Development
Judy Ryder	Filter Development
Bill Geiszler	Paper Development
Mable Fleming	PED

2021385325

**Slims 100's**

- I. **Objective:** Design and develop a generic 100mm with 23.0 circumference to compete with Misty.
- II. **Explanatory Introduction:** Defensive measure to address 100mm slims market in the price value format. This also represents an alternate for the Virginia Slims product line.

**III. Strategies:**

**Strategy I:** Develop and design prototypes from existing generic blends.

- A. Initial prototype design November 1991.
- B. Prototype production November 1991
- C. Prototype analytical testing November 1991

**Strategy II:** Design refinements fabricate new prototypes

- A. Design and produce prototypes 1st Quarter 1992
- B. Blend decision 1st Quarter 1992
- C. Draft specification 2nd Quarter 1992

**IV. Resource Allocations:**

Warren Claflin	Technical Advisor
Barbara Monahan	Domestic Product Development
Truman Foster	Commercial Development
Armine Manwaring	PED
Sainta Haywood	Operations Services

**V. Potential Projects:**

- Generic 100mm 23.0 circumference menthol

2021385376

## **Full Flavor Menthol**

I. **Objective:** Design and develop a generic KS and 100mm menthol full flavor SP

II. **Explanatory Introduction:** Products are being developed and positioned to fill voids in our existing generic line of products.

### **III. Strategies:**

**Strategy I:** Develop and design prototypes from existing blend.

- |                                 |               |

Warren Claflin	Technical Advisor
Barbara Monahan	Domestic Product Development
Truman Foster	Commercial Development
Mable Fleming	PED

### **V. Potential Projects:**

- Generic KS and 100mm menthol full flavor box

2021385372

## PROJECT AMBROSIA I

I. Objective: Develop cigarette prototypes which exhibit a vanilli-like sidestream aroma.

II. Explanatory Introduction: Development initiated to meet competitive challenge of the Horizon brand. Product line will address social acceptability benefit.

### III. Strategies:

Strategy I: Design, develop and POL test prototypes

A. POL test 23.0/100mm regular and menthol 9 and 11mg tar products 2nd Quarter 1990

B. POL test 24.0/100mm 2nd Quarter 1990

C. Ad Pack test 3rd Quarter 1990

D. POL test 24.8/100mm regular and menthol .15 and 3mg/cigt. GEV targets 2nd Quarter 1991

E. 24.8/85mm prototypes 4th Quarter 1991

F. Focus group test 24.8/85mm vs. 24.0/100mm. 4th Quarter 1991

Strategy II: Commercialization of GEV and application method to product

A. Develop specifications for GEV September 1992

B. Develop specifications for GEV added to the November 1992  
rod seam adhesive

### IV. Resource Allocations:

Linda Wettle	Domestic Product Development
Barbro Goodman	Paper Technology
Pete Talley	Engineering
George Yatrakis	Flavor Development

2021385378

## PROJECT AMBROSIA II

- I. **Objective:** Develop 24.8 KS and 24.0 100mm cigarettes which provide reduced visible sidestream and acceptable mainstream taste.
  - II. **Explanatory Introduction:** Program initiated to increase share and volume by providing either a free standing or line extension of existing brand to address a consumer benefit for the smoker in sidestream visibility reduction, reduced sidestream aroma or a combination of the two.
  - III. **Strategies:**
    - Strategy I:** Design and develop prototypes at 24.8 circumference KS and 24.0 circumference 100mm
      - A. Prototype production Complete
      - B. Consumer testing Phase I Complete
    - Strategy II:** Refinement of paper specifications/commercialization and improvements for mainstream taste
      - A. Identify paper and parameters for commercial manufacture TBD
      - B. Prototype production 4th Quarter 1992
      - C. Consumer testing 1st Quarter 1993

Linda Wettle	Domestic Product Development
Jim Pflueger	Flavor Development
Barbro Goodman	Paper Technology
Barbara Joyner	PED
Mable Fleming	PED
Arlington Finley	Filter Development

2021385379

E. CONSUMER TESTING

POL's

- I. Objective: Generate a data base of strength and liking scores for PM and competitors' products to identify new product opportunities and product/process improvements.
- II. Explanatory Introduction: The data base is reviewed on an ongoing basis to identify needs for additional data and those data points needing additional verification.

III. Strategies:

Strategy I: Routine testing of Philip Morris and competitor's product

A. Compile with PED routine product tests for 1992	Dependent upon POL requested ship dates
B. Issue official POL request sheet	Ongoing
C. Review of POL sheets for accuracy and signature approval	Ongoing
D. Fabrication requests to Semiworks	As required by schedule
E. Coordination/scheduling of Semiworks job requirements to accomplish specified ship dates	As required by schedule
F. Submit samples to CI for analytical results	As required by schedule
G. Review of analytical vs. product product specifications/historical data	As required by schedule
H. Submit to Richmond Panel for subjective approval to ship	As required by schedule
I. Communicate accept/reject status to Semiworks for shipment	As required by schedule
J. Prepare data for PED/Product Development review	As required by schedule

2021385380

Strategy II: Supply product for non-standard POL's

- |                                                                                          |                         |
|------------------------------------------------------------------------------------------|-------------------------|
| A. Determine special production requirements with PED                                    | As required by schedule |
| B. Request product from Semiworks or factory                                             | As required by schedule |
| C. Schedule and coordinate Semiworks job requirements to accomplish requested ship dates | As required by schedule |
| D. Factory packet preparation                                                            | As required by schedule |
| E. Coordinate/monitor test production at specified location                              | As required by schedule |
| F. Submit samples for analytical evaluation                                              | As required by schedule |
| G. Review analytical data for adherence to product specifications and historical data    | As required by schedule |
| H. Submit to Richmond Panel for subjective approval                                      | As required by schedule |
| I. Communicate accept/reject status for shipment                                         | As required by schedule |
| J. Prepared data for PED/Product Development review meetings                             | As required by schedule |

Strategy III: POL's for New Product Development

- |                                                                                       |                         |
|---------------------------------------------------------------------------------------|-------------------------|
| A. Identification of new product POL's for testing                                    | As required by schedule |
| B. Coordinate ship dates, semiworks request/production and deadline for results       | As required by schedule |
| C. Provide assistance to Project Coordinator as needed for sample production          | As required by schedule |
| D. Submit samples for analytical                                                      | As required by schedule |
| E. Review analytical data for adherence to product specifications and historical data | As required by schedule |
| F. Submission to Richmond Panel for subjective approval                               | As required by schedule |

**2021385381**

- G. Communicate accept/reject status for shipment As required by schedule
- H. Data preparation for PED/Product Development review meetings As required by schedule

Strategy IV: POL's for Product/Process Improvement Programs

- A. Coordination with Flavor Technology for POL's necessary to evaluate product and process improvement changes As required by schedule
- B. Coordinate with PED regarding official POL requests As required by schedule
- C. Coordinate ship dates, Semiworks request/ production and timing As required by schedule
- D. Communicate with Product Development coordinator regarding test requirements As required by schedule
- E. Submit samples to CI for analytical results As required by schedule
- F. Review analytical data for adherence to product specifications and historical data As required by schedule
- G. Notify Flavor Technology that cigarettes are complete and request their evaluation As required by schedule
- H. Submit to Richmond Panel for subjective approval As required by schedule
- I. Communicate accept/reject status of prototypes evaluated by the Richmond Panel As required by schedule

III. Resource Allocations:

PED	Panel Dependent
Semiworks	D. Birdsong
Operations Services	As assigned
Technical Services	As assigned
CI Laboratory	Group
Domestic Product Development	D. Atkinson-Ballos
Flavor Technology	Program Dependent
Flavor Smoking Panel	Program Dependent
Richmond Smoking Panel	
Precon

- B. Project Art
- C. Project Ambrosia
- D. Consumer Testing To be supplied by PED
- E. Consumer Testing To be supplied by PED
- F. (New Packaging Concepts) Added value to be supplied by John Hearn
- G. Data Base Management B. Maher

Should be Strategic Goal #3

2021385384

LOW TAR/HIGH FLAVOR

- I. **Objective:** Develop new technologies which will allow us, within the next two to four years, to produce "Ultra Low" tar, 2 to 4mg, cigarettes with the sensorial experience of "Lights" or "Full Flavored" cigarettes.
- II. **Explanatory Introduction:** Recent developments in filter and paper technology, innovative use of expanded tobacco and blending, and creative flavor development have led to the successful development of exceptionally good "Ultra Low" delivery cigarettes; "Merit Ultima."® These cigarettes will, however, have only limited appeal to "Lights" and "Full Flavor" smokers.

Several interesting things have happened both within and outside the tobacco/cigarette industry. We are seeing competition for our consumers from outside our industry, primarily from the drug industry. The "competing" products are, for example, nicotine chewing gum, nicotine patches and inhalers.

Within our industry, Premier by RJR and Delta, our response, and most notably our Beta, have demonstrated unique ways to compete with "conventional" cigarettes. These cigarette-like articles have also demonstrated the gross inefficiency of our conventional products. Full flavor cigarettes use 750mg of filler to deliver 16mg of tar and Ultra Low tar cigarettes use 500mg of filler to delivery 1-2mg of tar. Beta uses about 40mg of tobacco to provide subjective response.

If we use new technology, learn from Beta and what the competition is doing, we can maximize what we do best, make cigarettes minimizing the tobacco and tar and maximizing the nicotine delivery. We should be able to produce a product that appears to perform similarly to conventional cigarettes but with very little "tar" (2-4mg) and about 1mg of nicotine, and with the sensorial satisfaction of a 12-14mg cigarette.

III. **Strategies:**

- Strategy I:** Determine the parameters that control the temperature of a cigarette with the goal of reducing the temperature to somewhat above the distillation temperature of nicotine but below combustion temperatures and develop technologies to achieve this goal.
- Strategy II:** Minimize the amount of selected filler for cigarette construction.

2021385385

- Strategy III: Determine the type of tobacco material to be designed to aid in control of burn rate, puff count, and generation of specific compounds such as water.
- Strategy IV: Determine how to develop filters to provide satisfactory resistance with minimal filtration properties for specific compounds such as nicotine and water.
- Strategy V: Develop cigarette papers to prevent "rod collapse" and provide positive sidestream and mainstream attributes.
- Strategy VI: Determine and develop flavor compounds to be added to the smoke to enhance the sensorial effect.

## STRATEGIC GOAL 3

### ART PROGRAM 1992 OPERATIONAL PLAN February 10, 1992

#### PROGRAM OBJECTIVE

Develop subjectively acceptable products with a significant reduction in nicotine delivery from filler which, through supercritical CO<sub>2</sub> extraction, has a reduction in nicotine content.

#### INTRODUCTION

The purpose of this program is to address consumers' desires with new technology driven products. To be more specific, to add value to our products by addressing the perceived health concerns of our consumers. ART Technology (supercritical CO<sub>2</sub> extraction) offers us a means for lowering the nicotine delivery of our products while maintaining tar delivery. To the best of our knowledge, none of our competitors have developed this technology to the point of commercialization as has Philip Morris. Therefore, if our products are successful, it would be some time before we would face any competition in this area.

The objectives of this program are two fold. Our primary objective is to develop subjectively acceptable low tar products with a nicotine-in-smoke delivery of <0.1 mg/cigt. Our second objective is to develop families of products which deliver 50% of the nicotine of a conventional product at equal tar with comparable subjective response.

The major obstacle we face with this program is overcoming the subjective deficits encountered when the nicotine is removed from the filler. These deficits take the form of low to no impact and a pronounced off-taste. The main thrust of this program is to improve the subjective character.

#### A. DE-NIC PROGRAM

- I. Objective: Develop a family of subjectively acceptable low tar, regular and menthol products from filler which, through supercritical CO<sub>2</sub> extraction, has a residual nicotine level of <0.1%.

2021385387

## **II. Strategies:**

### **Strategy 1 - Support the current test market in Phoenix.**

1. Provide subjective and analytical support for production of test market allocation.

Responsible Person: Tom Gannon

Completion Date: As requested

### **Strategy 2 - Subjective Development/Incremental Change**

#### **Tactics:**

1. Flavor Technology work continues to evaluate new flavor systems which offer an improved subjective profile. This work includes the evaluation of existing flavor materials as well as the evaluation of flavor precursors and novel botanical extracts.

Responsible Person: Tom Gannon

Completion Date: 4th Quarter, 1992

2. Modification of filler pH through application of basic materials in the casing:

Responsible Person: Tom Gannon

Completion Date: 2nd Quarter, 1992

Complete evaluation of Calcium hydroxide casing systems.

Completion Date: 1st Quarter, 1992

Evaluate other materials to alter the pH of filler.

Completion date: 2nd Quarter, 1992

3. Evaluation of construction variables and new/novel filter systems for an improved subjective profile. Produce and evaluate the following prototypes:

10-058-A cigarette paper with 35% expanded at 9 mg tar (the Half-Nic cigt design) -- 1st Quarter, 1992

Dual-CA/PCC filter with lower ventilation than the current De-Nic cigarette construction -- 2nd Quarter, 1992

Dual-CA/Paper filters -- 2nd Quarter, 1992

2021385388

Evaluate optimized cigarette construction developments from the Half-Nic program -- 3rd Quarter, 1992

Responsible persons:

Construction: Barbara Hendricks

Filters: Greg Patron

4. Evaluate any technology developed in the Half-Nic portion of the ART program that yields an improved subjective profile.

#### **Strategy 3 - Bermuda Hundred Production Facility Support**

Provide all necessary support for the production facility as requested.

#### **Strategy 4 - Support of Low Tar/High Flavor Program**

Provide all necessary support for the Low Tar/High Flavor program as requested.

#### **Strategy 5 - Evaluate and develop process modifications for the utilization of ART process by-product tobaccos.**

Development of process modifications for use of post-ART stems continues. Testing in sheet materials involves substitutions for stem in RCB and RL's to determine acceptable levels. Tests of CA stems in RCB replacing Burley stems are in progress. A recommendation was made to include DLF-3B into all expanded ET products at a rate of 4% before expansion. This was implemented at the MC and Cabarrus plants on August 5, 1991 and is expected to be complete during the 1st quarter of 1992.

Responsible Person: J. Swain

Complete Date: 2nd Qtr. 1992

#### **Strategy 6 - Utilize any information or technology developed in the Sensory Technology Program.**

Responsible Persons:

Sensory Technology: R. Carchman

ART Program: G. N. Yatrakis

2021385389

## B. HALF-NIC PROGRAM

- I. **Objective:** Through the use of PM proprietary technology (ART), develop families of products which deliver 50% of the nicotine of a conventional product at equal tar with comparable subjective response.

II. **Strategies:**

**Strategy 1 - Half-Nic Development**

Tactics:

1. Modification of filler pH through application of basic materials in the casing:

Complete evaluation of Calcium hydroxide casing systems.

Completion Date: 1st Quarter, 1992

Initiate POL testing: 1st Quarter, 1992

Evaluate other materials to alter the pH of filler.

Completion date: 2nd Quarter, 1992

POL testing: 2nd Quarter, 1992

Responsible Person: Tom Gannon

Completion Date: 2nd Quarter, 1992

2. Evaluation of construction variables and new/novel filter systems for an improved subjective profile. Produce and evaluate the following prototypes:

Dual-CA/PCC filter with lower ventilation than the current Half-Nic cigarette construction at 9 mg Tar -- 2nd Quarter, 1992

Dual-CA/Paper filters -- 2nd Quarter, 1992

Responsible persons:

Construction: Barbara Hendricks

Filters: Greg Patron

3. Produce and evaluate prototypes at various tar deliveries.

~16 mg Tar, ~0.55 mg nicotine, KS and 100 mm, regular and menthol, with maximized Tar per Puff.

2021385390

Low Tar (~5 mg), ~0.2 mg nicotine, KS and 100 mm, regular and menthol with maximized Tar per Puff.

Responsible Persons:

Construction: Barbara Hendricks

Filler/coordination: Tom Gannon

Completion Date: 2nd Quarter, 1992

4. Casing/Aftercut Development -- Laboratory development of flavor systems will be ongoing throughout the cycle of development described above. Final flavor systems will be geared toward accentuating strength, tobacco flavor and developing a balanced product.

Responsible Person: Tom Gannon

Completion Date: 3rd Quarter, 1992

**Strategy 2 - Optimize construction, subjective presentation and initiate POL testing of finished models**

Initiate POL testing: 3rd Quarter, 1992

**C. RESOURCE ALLOCATION ART PROGRAM**

Flavor Technology Division	2.00
Cigarette Technology Division	0.50
Filter Technology Division	0.25
Analytical Research Division	1.00
Cigarette Testing	0.50
Tobacco Processing and Fabrication	2.50
Total	6.75

2021385391

G. COMPUTER APPLICATIONS

DATA BASE MANAGEMENT  
(COMPUTER MODELLING)

- I. Objective: Design and implement an integrated modelling and data base management for Product Development.
- II. Explanatory Introduction: Product Development uses a few but important computer programs. They also interface with groups employing their own independent applications. Due to the different originators and variety of applications involved, information control and exchange is cumbersome. A system tailored to the informational flow and needs of product development will reduce prototype development time and errors. The system will be designed to interface with those implemented by the Supply Chain Project.

III. Strategies:

Strategy I: System Requirements Analysis

- A. Identify enhancements to "design" March 1992
- B. Identify all relevant information and responsible people May 1992
- C. Present findings to management June 1992

Strategy II: System Design

- A. Define system layout and necessary hardware, data and user interfaces August 1992
- B. Present to management August 1992

Strategy III: Software Requirements

- A. Identify usable "as-is" programs September 1992
- B. Identify PM designed modules September 1992

2021385392

2021385393

Strategy IV: Preliminary Design

- |                                           |               |
|-------------------------------------------|---------------|
| A.. Data interface/interchange definition | November 1992 |
| B.. User interface definition             | January 1993  |
| C.. Present to management and group       | February 1993 |

Strategy V: Detailed Design

- |                                             |           |
|---------------------------------------------|-----------|
| A.. Refinement of user interface definition | June 1993 |
| B.. Present to management and group         | June 1993 |

Strategy VI: Coding and Testing

- |                                 |               |
|---------------------------------|---------------|
| A.. Individual interface coding | December 1993 |
| B.. Coding of PM custom modules | February 1994 |

Strategy VII: Software and Hardware Integration

- |                                                   |            |
|---------------------------------------------------|------------|
| A.. Bring first users online for testing purposes | March 1994 |
| B.. Identify and fix system deficiencies          | April 1994 |
| C.. Final draft of documentation prepared         | June 1994  |

Strategy VIII: Operations and Maintenance

- |                                                   |             |
|---------------------------------------------------|-------------|
| A.. Release system to Product Development         | July 1994   |
| B.. Turnover of software and documentation to CAD | August 1994 |

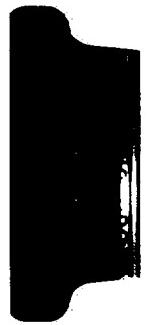

Strategy IX: Supply Chain Project

Similar strategies and tactics will follow. Timetables will be established and resources identified as Supply Chain systems are developed and implemented.

**IV. Resource Allocations:**

## ET/NET PRODUCT INCLUSION

<b>Objective:</b>	To substitute and evaluate NET materials in existing brands.	
<b>Introduction:</b>	NET expanded materials are to be used in existing brands to increase yield and filling power. These improvements will have to be demonstrated, as well as, not effecting the subjective effects of the particular brand.	
<b>Strategy I:</b>	Evaluate the substitution of NET processed #10 bright for DETA and incremental replacement of bright.	
Tactics	Timetable	
NET vs DETA at 12% in Marlboro cigarettes to determine physicals.	February, 1992	
Incremental increase above 12% NET to test physical and subjective effects.	March, 1992	
<b>Strategy II:</b>	Evaluate models that incorporate NET processed BLDET, burley and bright in various brands initially at current rates. The qualification of increased levels of NET materials in the various blends will be done on a secondary basis. Merit, Merit Ultra Lights, and Marlboro will be evaluated first.	
Tactics	Timetable	
Subjective evaluations of NET processed BLDET, burley, and bright as 100% components	March, 1992	
Optimize expansion parameters of burley and oriental	June, 1992	
Subjectively evaluating new blends designed by Blend Development	June, 1992	
Incorporation of NET materials in Merit and Merit Ultra Lights	June, 1992	

2021385397

**Packaging Studies: Operational Plan  
1992**

**Strategic Goal 1:** Support the company's present product lines and business operations.

**I. Objective:** Qualify suppliers of waterborne printing inks in order to meet fast flow inventory criteria and to have one family of brands printed with this technology.

**Strategies/Tactics - Timetables**

**Strategy:** Establish a partnership with an ink company committed to waterborne inks.

**Tactic/Timetable:** Provide input to Purchasing on selection of an ink company  
March, 1992

Provide technical support on an as-requested basis.

**Strategy:** Develop an analytical procedure for determining specification levels of waterborne ink components in packaging material

**Tactic/Timetable:** Investigate analytical techniques for quantitating components in this ink system.

March, 1992

Transfer method to QA and vendors:

September, 1992

**Strategy:** Correlate levels of waterborne ink components with subjective acceptability.

**Tactic/Timetable:** Determine the organoleptic threshold of components by evaluating each individually and in a mixture.

December, 1992

**Strategy:** Develop printing specifications for printed waterborne packaging material with respect to inks, lacquers, solvents and substrates.

**2021385399**

**Tactic/Timetable:** Evaluate each component for analytical and subjective acceptability.  
December, 1992

Provide service to Purchasing when evaluating new components on an as-requested basis.

**Strategy:** Support the evaluation of new ink systems and/or vendors.

**Tactic/Timetable:** Provide analytical and subjective evaluation of new items on an as-requested basis.

**Resource Allocations:**

Flavor Technology:	B. Mait - Program Coordinator	- 0.5 man years
	R. Hale - Basic Investigations	- 0.5 man years
	T. Cravotta - Subjective Evaluations	- 0.5 man years
Analytical Division:	D. Ingraham - Analytical Support	- 0.3 man years

**II. Objective:** Qualify suppliers of offset printing for use on promotional items and low volume brands.

**Strategies/Tactic - Timetable**

**Strategy:** Develop an analytical procedure for determining specification levels of offset ink components in packaging material.

**Tactic/Timetable:** Investigate analytical techniques for quantitating components in this ink system.

July, 1992

Transfer method to QA and vendors.

September, 1992

**Strategy:** Correlate levels of offset ink components with subjective acceptability.

**Tactic/Timetable:** Determine the organoleptic threshold of components by evaluating each individually and in a mixture.

December, 1992

**2021385400**

**Strategy:** Develop printing specifications for printed offset packaging material with respect to inks, lacquers, solvents and substrates.

**Tactic/Timetable:** Evaluate each component for analytical and subjective acceptability.  
December, 1992

Provide service to Purchasing when evaluating new components on an as-requested basis.

**Strategy:** Support the evaluation of new ink systems/vendors.

**Tactic/Timetable:** Provide analytical and subjective evaluation of new items on an as-requested basis.

**Resource Allocations:**

Flavor Technology:	B. Mait - Program Coordinator	- 0.5 man years
	T. Cravotta - Subjective Evaluations	- 0.5 man years
	R. Hale - Basic Investigations	- 0.5 man years
Analytical Division:	D. Ingraham - Method Development	- 0.5 man years

**III. Objective:** Develop a working database for Packaging Studies. This database will contain information on vendors, ink formulations, substrates, lacquers, solvents, etc. This database will be capable of searching by various fields of input.

**Strategy/Tactic-Timetable:**

**Strategy:** Work with Computer Applications Division on developing the necessary software for the database.

**Tactic/Timetable:** Database to be installed. July, 1992

**Resource Allocations:**

Computer Applications - R. Lipps	- 0.3 man years
Packaging Studies - R. Dunaway	- 0.5 man years

**IV. Objective:** Determine the effects of high barrier film on our products.

2021385401

**Strategy/Tactics-Timetable:**

**Strategy:** Support Quality Engineering in the investigation of new high barrier film for use on our products.

**Tactic/Timetable:** Continue representing Packaging Studies on the Cigarette Shelf Life Improvement Team.

Provide analytical and subjective evaluation of films on an as-requested basis.

**Resource Allocation:**

Packaging Studies - 0.3 man years

**V. Objective:** Monitor and qualify promotional items received from Purchasing.

**Strategy/Tactic-Timetable:**

**Strategy:** Evaluate the promotional items for material, chemical and subjective acceptability.

**Tactic/Timetable:** Report analytical and subjective results to appropriate personnel on an as-requested basis. Subjective evaluation will continue until an analytical procedure is in place to qualify these items.

**Resource Allocations:**

Flavor Technology -	B. Mait/R. Dunaway, Coordinators	- 0.5 man years
	R. Hale - Analytical	- 0.3 man years
	T. Cravotta & Packaging Panel - Subjective Evaluation	- 0.25 man years

**VI. Objective:** Qualify packaging material for new brand introductions, line extensions and package graphics changes.

2021385402

**Strategy/Tactic-Timetable:**

**Strategy:** Evaluate new material for analytical and subjective results and report to appropriate personnel on an as-requested basis.

**Resource Allocation:**

B. Mait/R. Dunaway, Coordinators	- 0.5 man years
R. Hale - Analytical	- 0.5 man years
T. Cravotta & Packaging Panel - Subjective Evaluation	- 0.25 man years

**Packaging Studies Resource Allocations:**

Project Leader	1 man year
Scientist	1 man year
Product Testing Tech II	1 man year

2021385403

**Hoechst High Barrier Films**  
**(Support to Quality Engineering )**

**Objective:** To determine the impact of the improved sealant layer developed by Hoechst for their high barrier OPP films, on pack seal efficiency. To determine the impact of the Hoechst film on the product's ability to maintain targeted moisture levels in the desert and jungle rooms. To perform a preliminary subjective test to qualify the Hoechst High Barrier films.

**Introduction:** Preliminary machine evaluations were conducted in September, 1991, which indicated the Hoechst ZNA-25 HB (100 G) had superior sealing characteristics as compared to our standard (Mobil BSR-80 G). Indications also showed approximately a 30% improvement in moisture barrier properties when exposed to adverse conditions(desert and jungle conditions).

**Strategies:** Repeat the testing conducted in September, 1991, to confirm the sealing characteristics of the Hoechst HB ZNA-25 on the high speed wrapper (GD 500) and the moisture barrier properties. To determine the sealing characteristics of Hoechst HB ZNA-20(80 G) and Hoechst HB ZNA-30(120 G). Define the sealing characteristics of each of the above and compare the results to the Mobil overwrap. Determine the moisture barrier properties of each and the impact on subjectives with the improved moisture barrier materials.

<u>Tactics</u>	<u>Timetables</u>
Production of Marlboro LS with the control (Mobil) and Hoechst films. initial subjectives prior to testing	February, 1992
Initiate testing under adverse conditions	February, 1992
Subjective evaluation of the conditioned samples on a weekly basis until subjectives are unacceptable for the improved films	May, 1992

2021385401

<b>Recommendations</b>	<b>June, 1992</b>
<b>Repeat testing, if needed</b>	<b>July, 1992</b>
<b>Subjective evaluation, as needed</b>	<b>December, 1992</b>

## RJR Flavorseal Overwrap

**Objective:** Determine if products with Flavorseal packaging maintains their physical, chemical and subjective properties longer than products with polypropylene overwrap.

**Introduction:** RJ Reynolds uses a metallized polyester overwrap on their Winston and Salem brands. They claim this overwrap keeps the product fresher, longer. This series of tests will look at the products under various environmental conditions to determine if freshness is maintained. The environmental conditions to be tested are ambient, desert, jungle and cycled (inhouse conditioning chamber). The conditions are to cover the possibilities that a product could encounter in the marketplace.

**Strategy:** Compare the polypropylene overwrap with the Flavorseal overwrap for the Winston and Winston Lights 100's SP and Salem and Salem Lights 100's SP.

<u>Tactics</u>	<u>Timetables</u>
Recommendation on test set-up	February, 1992
Initiate environmental testing	March, 1992
Complete environmental testing. Subjective evaluation every two weeks for the first two months, then monthly for the last four months	September, 1992
Subjective based recommendations	October, 1992

### Resources:

Testing (CTSD, QE and ARD)	C. Spielberg, B. Rech and B. Handy - 0.05 man-years
Subjective evaluation	V. Willis and K. Deane 0.04 man-years

**Factory Primary Support  
1992 Operational Plan**

**Objective:** To provide support for the subjective qualification of factory primary modernization programs.

**Introduction:** Factory primary equipment requires periodic upgrades and modernization for more efficient and cost effective processing of tobacco prior to cigarette production. All equipment changes require subjective evaluation and qualification prior to implementation to assure product integrity. Flavor Technology (D. Spruill and subjective panels) will continue this support function as needed throughout 1992.

**Strategy #1:** Qualify the new MZM export strip operation at McKinney, VA.

**Tactics:** Compare the current MZM operation with the new MZM facility by preparing products from each location and by performing subjective evaluations for product/process qualification. February, 1992

**Strategy #2:** Qualify new P&S Dryer #3 at the MC.

**Tactics:** Burley tobacco will be processed at single and double rates.

Analytical and subjective evaluations of 100% burley and Marlboro cigarettes will be performed to qualify the dryer at both rates. March, 1992

**Strategy #3:** Replace and qualify P&S Dryers #1 and #2 at the MC.

**Tactics:** Evaluate new dryers at single rate.

Prepare cigarettes (100% burley and Marlboro) and evaluate both analytically and subjectively for dryer qualification. September, 1992

**Strategy #4:** Replace and qualify A/C cylinders at the MC.

**Tactics:** Install one large capacity cylinder, prepare cigarettes and qualify this cylinder subjectively.

2021385407

Systematically, remove remaining A/C cylinders and qualify each individually as above. July, 1992

**Resource Allocations:**

Flavor Technology	0.30
Tech. Services	0.05
CTSD	0.05
ARD	0.05
Semi-Works	0.07
Cigarette Technology	0.03
QA and Mfg. Engineering	
Total R&D	0.50

2021385408

## **Small Scale Process Improvement**

**Objective:** To achieve parity with large scale so that sample size would be the only factor for determining whether requests are produced in Small Scale or Large Scale.

**Introduction:** Modifications were made in the small scale processing in 1991 to bring the processing conditions of the small scale closer to that of large scale. The modifications included the installation of new equipment, and changes in the existing equipment. Since most of the jobs that are requested in small scale have a master blend that was produced in large scale and additional flavor systems are applied in small scale, it was agreed that the process would be qualified from the aftercut system backward. The "old" small scale process still exists (with the exception of a change in the aftercut application) and will be used as in the past.

**Strategy #1:** Small Scale Processing will continue to be used as a screening tool to reduce the number of samples requested for large scale processing.

<u>Tactics</u>	<u>Timetables</u>
Casings, flavors and blends to be screened from the small scale process prior to making larger quantities in the large scale process	Ongoing

**Strategy #2:** Establish operating procedures and processing parameters for the new equipment.

July, 1992

**Strategy #3:** Examine the individual processing steps and strive to understand and minimize the differences between Large Scale and Small Scale.

<u>Tactics</u>	<u>Timetables</u>
Investigate the aftercut application	March, 1992

2021385409

Investigate the conditioning, cutting and drying	April, 1992
Investigate bright/oriental casing	June, 1992
Investigate burley top casing	July, 1992
Investigate burley spray	August, 1992
Investigate rotary batch conditioning (vs vacuum conditioner)	September, 1992
Investigate total process	October, 1992
Recommendation	December, 1992

## **Tobacco Materials and Reclamation**

**Objective:** Subjectively evaluate returned goods and/or out of specification filler to determine most cost effective disposition.

**Strategy:** Determine most cost effective disposition (rippers; expanded, sheet products) of filler while maintaining subjective integrity.

**Tactic:** Prepare cigarette models, determine subjectives, and recommend disposition.

**Timetable:** As requested.

**Resources:** As required.

**2021385411**

## Processing Plant Support

### **PARK 500**

### **RL's**

**Objective:** Provide Flavor Technology support to Park 500 for flavor systems and process modifications to address capacity, economic, environmental and overall quality issues.

**Introduction:** Evaluation of feedstock humectant level, flavor replacements and equipment modifications have continued to support production in maintaining quality. Implementation of the dry flavor replacement and process modifications contributed to improved processing. Support in 1992 will address feedstock issued such as Class tobacco utilization and alternate denitration options.

**Strategy I:** Provide support for the evaluation of by-products utilization at Park 500.

<u>Tactics</u>	<u>Timetable</u>
Identify potential ranges of usage from previous tests if available	As requested
Evaluate in RL Pilot Plant prior to Park 500 feedstock	As needed
Stability/Usage of Class W from production sources to Park 500	May, 1992

**Strategy II:** Develop and evaluate alternate denitration options with Process Development through separate Burley stem processing.

<u>Tactics</u>	<u>Timetable</u>
Apply experiences learned from alternate jobbers trials of separate stem processing.	
RL Pilot Plant trials of RLTC and RLB. Complete	

2021385412

Semiworks trials for physicals and subjective testing	March, 1992
Cigarettes analyses and panel tests	April, 1992
Subjective (Go/No go) decision to go to Park 500 RL's	June, 1992
Production trials at Park 500 - Similar tactics as above from Pilot RL's	August, 1992
Complete POL consumer tests, physical tests, and product cost of discarding and treating of burley stem solubles	November, 1992

**Resources:**

Flavor Technology	B. Taylor - 0.20
Flavor Technology	J. Swain - 0.10
Process Development	R. Uhl/R. Ellis

PED	M. Jeltema

2021385413

## Processing Plant Support

**BL PLANT**

**RCB**

### **I. Increased Line Speed**

**Objective:** To increase capacity by increasing line speed.

**Introduction:** Trials began in June, 1991 to increase line speed from 330 fpm to 350 fpm without changing subjective. The increase line speed at normal solids levels (18.5%) required higher drying temperatures to maintain a 16.0% moisture. Trials in June (1-3) and July (1-3) were ineffective to find the correct dryer profile to maintain subjective parity.

A third series of trials were conducted in November (4-6). These incorporated temperatures in-between the June and July series. It was indicated that temperatures in the initial zones (1-3) have a greater influence on subjective. The test with the closest average temperature ( $680^{\circ}\text{F}$ ) to the control ( $675^{\circ}\text{F}$ ) showed no subjective differences. This test (6) is presently being prepared for POL 03012.

**Strategy I:** In order to predict dryer temperature profiles at 350 fpm for the other two lines, a better understanding of the dryers is needed. Therefore, a dryer study should be conducted to establish temperature profiles in the following manner:

<u>Tactics</u>	<u>Timetable</u>
A. Document Dryer Operation-All lines	
1. Baseline OV profiles	
2. Baseline air flow/temperatures	
3. Baseline subjective	
4. Environmental sampling	April, 1992
B. Modify Line 3	
1. Adjust Line 3 dryer setup to Line 1	
2. Subjective evaluations	May, 1992
C. Modify Line 2	

2021385414

1. Adjust Line 2 dryer setup to Line 1
2. Subjective evaluations
3. Subjective baseline of Line 2 and Line 3 modifications

October, 1992

**Strategy II.** Once the modifications to the dryer temperatures are complete, the speed-up trials will be conducted in the following manner:

<u>Tactics</u>	<u>Timetable</u>
A. Speed-Up Trials: 1. Line 2 trials 2. Internal subjectives 3. Line 3 trials 4. Internal subjectives	February, 1993
B. Subjective Evaluations of the 3 Lines Combined: 1. Internal evaluations 2. Conduct POL of RCB(3 Lines)	April, 1993
C. Recommend speedup to BL Plant, if feasible	June, 1993

## **II. Dry Flavor Replacement**

**Objective:** Develop a liquid flavor system to replace dry flavors in RCB while maintaining subjective parity.

**Introduction:** The BL Plant is presently using a dry flavor system. The flavors are blended with the production dust and the mixture is not homogeneous. In an effort to produce a more consistent sheet, liquid flavors will replace dry flavors. This will also reduce cleanup in the blending area.

Two sheets were produced in September using 75-700 and 75-700 + 02-130 instead of dry flavors. These prototypes were evaluated and the sheet with 75-700 was selected for further testing. A POL was produced which showed no significant differences.

2021385415

Implementation has been recommended to the BL Plant.

**Strategy:** Implementation will be supported by the preparation of drums of 75-700 at the Flavor Center and personnel will monitor the initial startup. Initial RCB (100%) cigarettes will be subjectively evaluated by members of Group 2305.

### III. Mentholated Tobacco Dust (Class 6)

**Objective:** To increase the utilization level of mentholated tobacco dust in RCB.

**Introduction:** The current level of mentholated tobacco dust used in RCB is 15% (14.5% Class 6 and 0.5% Class 4M). However, with the present inventory and future plans for generation of Class 6, increased utilization in RCB has been proposed.

During 1991, levels of 15%, 25% and 30% in finished sheet were produced in the Cast Leaf Lab. No menthol was detected subjectively or analytically. Therefore, the above was reproduced in the Process Chemistry and Tobacco Fundamentals Lab. No menthol was subjectively or analytically detected by this process either.

**Strategy:** Due to the fact that menthol was not detected by either method, trials have been requested in the Cast Leaf Pilot Plant in April prior to production trials.

#### Tactics

Subjective evaluations will be conducted by Cast Leaf Panel and FTD's Panel in Marlboro. Selection of a level of Class 6 for BL Plant trials will based on the results.

#### Timetable

June, 1992

2021385416

Trials at the BL Plant with the higher  
level of Class 6 will be requested per  
BL Plant's schedule.

July, 1992

- a. The same subjective procedures  
will be followed as above with  
the addition of the MC Panel  
prior to requesting a POL.              August, 1992
  
- b. Upon completion of qualification  
tests, recommendation will be  
made to Leaf Department.              October, 1992

#### **IV. Unwashed Burley Stems**

**Objective:** To evaluate unwashed replacing washed burley stems in RCB to address environmental effluent issues.

**Introduction:** In August the BL Plant produced RCB using unwashed Burley stems, samples of sheet, slurry and dust were sampled for chemical analyses in an effort to track NO<sub>3</sub>-N content.

After internal panel evaluations, a POL was produced using the unwashed burley stems in RCB, but due to low tar values it was not released. A decision was made to remake the test RCB with unwashed burley stems, reduced humectants and liquid flavor for qualification of the combination of changes.

**Strategy:** Subjectively qualify unwashed burley stems in production RCB.

<u>Tactics</u>	<u>Timetable</u>
----------------	------------------

BL Plant trial of RCB with unwashed burley stems, reduced humectants and liquid flavor.	February, 1992
-----------------------------------------------------------------------------------------------	----------------

2021385417

Review of NO<sub>3</sub>-N impact on smoke from  
use of the RCB in blends (R. Uhl,J.  
Charles and M. Bourlas). February, 1992

Evaluations of impact on cigarette  
yield/filling power (R. Uhl). March, 1992

Subjective qualification-POL test April, 1992

If implementation is feasible, equipment  
modifications to bypass extractor and  
press are anticipated (J. Gomes). May, 1992

## ALTERNATE SHEET SOURCING

**Objective:** To qualify potential alternate sources of RL to address capacity issues.

**Introduction:** Domestic feedstock trials at Spotswood and LTR failed to subjectively replace RLTC while ARL showed more promise. Modes of processing the Burley stems were identified as contributing to the subjective differences in the RL Pilot Plant. Completed LTR trials with European feedstocks and RLTC flavor system were made to confirm the influence of processing differences.

**Strategy:** Develop and evaluate alternate(Jobbers) sources of RL with the RLTC flavor system to address long term capacity and European sourcing issues.

<u>Tactics</u>	<u>Timetable</u>
Subjective results of screening 100% LTR cigarettes by PME Leaf Group were similar to our Group's results in 24% handmade cigarettes for recent trials at LTR.	January, 1992
LTR test sheets produced with the burley press cake routed to the stock chest and concentration of solubles through the Multiple Effect Evaporator were selected for MiniPrimary trials at PME.	February, 1992
Complete storage study of conditions to transport and hold the export TC flavors.	February, 1992
Subjective evaluations in Pan-European and German Marlboro by Panel A may be followed by Consumer Panel testing.	April, 1992
Pending results from these trials, logistics of supplying the flavor system will be coordinated through Operations Services.	As requested

## COOKED FLAVOR CAPACITY

**Objectives:** To support cooked flavor production and scale-up the reactor at the Flavor Center.

To qualify alternate sources for high fructose corn syrup and asparagine.

**Introduction:** The Flavor Center has requested that their cooked flavor reactor be scaled up. The projected demand is larger than their reactor can supply with a one-shift operation. Statistical Process Control (SPC) is going to be introduced and the present vessel is not set up to work with SPC. The larger vessel would therefore have better process control mechanisms, which would decrease the number of rejected or blended-borderline batches.

New suppliers of High Fructose Corn Syrup (HFCS) and asparagine are needed. The variability of HFCS has continued to be an issue while a domestic source of asparagine is desirable. To avoid future quality issues, new suppliers will be evaluated.

**Strategy:** Flavor Technology personnel will support these goals through collaborations with Operations Services, Engineering, Purchasing and Flavor Center personnel to formulate with the alternate materials and evaluate 75-814 from the improved reactor system..

<u>Tactics</u>	<u>Timetable</u>
Justifications for scale-up will be written by the Flavor Center.	February, 1992
Initiate installation of new reactor.	When approved
Flavor Center trials of cooked flavor using Krystar HFCS and Monsanto asparagine.	July, 1992
Trials of test flavors will be run in the RL Pilot Plant for subjective evaluations on internal panels	When available

## Domestic Panel Support

- Objective:**
1. To provide subjective evaluations (rod and smoking characteristics) of prototypes, modifications of existing brands, new brands and monitoring of competitors' products.
  2. To provide training, maintenance and support to auxiliary panels (e.g., Richmond, Semi-Works, filter, paper and Cast Leaf.)

**Introduction:** Flavor Technology has provided subjective support to internal and external areas within Philip Morris. In 1991, over 250 panels, 58 subjective profiles of existing brands and one market introduction (Marlboro Medium) were completed. Factory problems concerning subjectives were also addressed. Members of the Cast Leaf program were trained and are currently evaluating Cast Leaf prototypes.

**Strategy #1:** Conduct evaluations on development programs, monitoring of domestic competitive brands and any problems associated with production and/or processing plants.

<u>Tactics</u>	<u>Timetables</u>
Complete KGF Study Evaluations	March, 1992
Complete Project Gold Study (Pre-applied Adhesives)	April, 1992

### International Panel Support

**Objective:** 1. To provide subjective evaluations (rod and smoke characteristics) of development prototypes, modifications of existing brands and monitoring of export (PM and competitors) brands.

**Objective:** 2. To provide training and maintenance for the international panel and auxiliary export panels.

**Introduction:** The International panel has provided subjective support to internal and external areas within Philip Morris. Forty-eight (48) subjective characterizations and 96 panels were completed in 1991.

**Strategy #1:** Continue to monitor existing brands and provide subjective evaluations in prototype development. Further training will be conducted to standardize panel.

<u>Tactics</u>	<u>Timetables</u>
Screening in basic taste, aromatics, use of scales and attribute training	March, 1992
Standard Method - Sensory Evaluations: Workshop for the Australia/Asia Pacific Region (review of panels and sensory techniques)	March, 1992
Training on blends and components (export and domestic)	May, 1992

## **Marlboro Standardization**

**Objective:**

1. To identify and reduce sources of variations in PM brands between production and processing facilities.
2. To provide training, maintenance and support to factory panels which could possibly identify and reduce sources of taste/odor/stale customer complaints.
3. To subjectively test and monitor Marlboro product from different locations externally (POL testing).

**Introduction:**

Marlboro Standardization was initiated in 1984 to ensure PM brands produced at different locations were subjectively equivalent. In February, 1985, the first factory pickup of Marlboro LS and KS was conducted with Standard Runs I and II following in June and September. These runs concentrated on the subjective effects of interchanging ET with DET, age of materials and aftercut tobacco temperatures. A Marlboro Standardization panel was started to subjectively evaluate the pickups and standard runs. From 1985-1991, nine standard runs have been completed. A historical database on raw materials, direct materials, processing parameters, blend components, etc. has been established. This data has been used in qualifying equipment, determining uniform processing parameters and product development. Good manufacturing practices and process specifications for primary culminated from this data. These manufacturing practices and process specifications have been issued to the production facilities for daily use.

**Strategy #1:**

Conduct factory pickups and a standard run to monitor the quality of Marlboro by subjective and analytical testing.

**Tactics**

**Timetables**

Factory pickup of Marlboro and  
Marlboro Medium KS and FTB

February, 1992

Issue results of February pickup

April, 1992

2021385430

Factory pickup of Marlboro Lights SP and FTB	April, 1992
Issue results on April pickup	June, 1992
Factory pickup of Marlboro and Marlboro Medium SP and FTB	June, 1992
Issue results of June pickup	July, 1992
Prepare for Marlboro Standard Run X	July, 1992
Marlboro Standardization Run X	August, 1992
Issue subjective results from Marlboro Standard Run X	October, 1992
Factory pickup of Marlboro Lights SP and FTB	October, 1992
Issue revised Factory Panel Leader Manual	December, 1992
Factory pickup of Marlboro and Marlboro Medium SP and FTB	December, 1992
Transfer flavor audits to Factory QA's	December, 1992

**Resources:**

## **Cigarette Storage/Transportation/Shipping Study (Support to Quality Engineering)**

**Objective:** Define the impact of cycling temperature and humidity typically seen within shipping containers and the effects of heating and cooling cycles on product discoloration, staining, subjectives, and analyticals.

**Introduction:** Based on information from simulated studies on the shipping containers and the Export Product Standardization - Singapore study, a program was formulated to address several issues. The first phase of the simulated study at KGF was a cycling of temperature and humidity conditions during a twenty-four (24) hour period. The testing was conducted at KGF with the profiles typically seen in Richmond in August through the beginning of September.

A total of fifteen (15) samples were shipped to KGF for testing. The following dates were designated for sample acquisitions from the Storage Box at KGF.

Test initiated	December 9, 1991
Pick-up #1	December 12, 1991
Pick-up #2	December 19, 1991
Pick-up #3	December 26, 1991
Pick-up #4	January 2, 1992
Pick-up #5	January 9, 1992
Pick-up #6	January 16, 1992
Pick-up #7	January 23, 1992

**Strategy #1:** Subjectively evaluate the fifteen models that were shipped to KGF and returned to Richmond without being exposed to the simulated study with cycling temperature and humidity conditions. Evaluate each of the models from the scheduled acquisitions of the simulated study and compare them to the control to determine when and how the subjective effects of the products changed.

2021385437

<u>Tactics</u>	<u>Timetables</u>
Complete initial evaluation of models shipped to KGF and returned to Richmond	January, 1992
Complete evaluation of models shipped to KGF and exposed to the conditioning chamber (Standard film)	February, 1992
Complete subjective evaluation of cartons with higher gauge film, with and without overwrap, that have been subjected to the cycling temperature and humidity conditions., to determine the quality and effect on subjectives	March, 1992

**Resources:**

Testing	B. Rech and M. Mobrem - QE
Product Development contact	G. Overstreet - 0.05 man-years
Subjective evaluation	B. Tierney and V. Graff-Muse 0.10 man-years
Analytical evaluation	V. Willis and K. Deane 0.04 man-years
	M. Mobrem and Judith Lighter 0.05 man-years

**Strategy #2:** Repeat the testing in Strategy #1 with specified models and conditions for the Export Product Standardization - Singapore and the GCC Study to determine the effects of cycling temperature and humidity conditions in the shipping containers. Conditions, based on previous data, will be simulated in a controlled environmental chamber.

<u>Tactics</u>	<u>Timetables</u>
Initial evaluation of models from the inhouse conditioning chamber with standard materials	June, 1992

2021385438

Complete subjective evaluation of high  
gauge film from the inhouse conditioning  
chamber

July, 1992

Report findings

August, 1992

Recommendations

September, 1992

**Resources:**

Testing	B. Rech and M. Mobrem - QE
Cigarette Technology contact	G. Overstreet - 0.05 man-years
Subjective evaluation	B. Tierney and V. Graff-Muse 0.03 man-years
Analytical evaluation	V. Willis and K. Deane 0.04 man-years
ARD	M. Mobrem and J. Lighter 0.01 man-years
	B. Handy 0.01 man-years

2021385439

## Export Product Standardization - GCC

**Objective:** Determine the impact of adverse environmental conditions upon the subjective character and analytical specifications of finished products. Compare the results of this study with similar studies conducted using products with carbon filters.

**Introduction:** Concerns have existed for years over the condition(s) of P.M. products that reach consumers in foreign countries due to the excessive transport time, climatic conditions, damage, etc., which occur between the initial shipping date and the date of consumer purchase.

This project addresses the subjective character changes due to adverse climatic conditions with time, and to provide insight to resolve these subjective changes.

**Status:** The following models are under evaluation for the GCC Export Product Standardization:

Control: Marlboro LS FTB (12.5% Pack O.V.) with GCC leaf blend, standard casings and standard export aftercut

Test #1: Same as Control with 13.25% Pack O.V.

Test #2: Marlboro LS FTB (12.5% Pack O.V.) with GCC leaf blend, standard casings and domestic aftercut

Test #3: Same as Test 2 with 13.25% Pack O.V.

**Strategy** Environmental testing with subjective and analytical tracing to determine the effect of subjectives and flavor at adverse conditions.

Tactics

Initiate environmental testing

Timetables

December, 1991

2021385440

Interim report for the Desert, Jungle, Coldroom and Ambient conditions over the six weeks of testing and subjective evaluation	February, 1992
Complete the six month testing for analytical and subjective testing	June, 1992
Comparison of results with carbon filter products	August, 1992
Completion report and recommen- dations	September, 1992
Produce products with recommended changes	October, 1992
Subjective evaluation	November, 1992
Make products with recommended and the best film to date and initiate environmental testing	January, 1993

**Resource:**

2021385441

### Volatile Component Aging Study

**Objective:** Determine the subjective and analytical changes in products with carbon in filters which occur under various conditions with age.

**Introduction:** For years, the effect of activated carbon (high surface area) on volatile substances has been well documented. Activated carbon has been used in certain cigarette filters for its "filtering" effect of smoke "gas phase". However, little is known in the correlation between this "absorption" effect in the cigarette before use and the after effect in the subjectives during use. This project is an attempt to identify that correlation.

**Strategy:** Environmental testing with subjective and analytical tracing to determine the effects of subjectives and flavor at adverse conditions

<u>Tactics</u>	<u>Timetables</u>
Initiate environmental testing	November, 1991
Interim report for the Desert, Jungle, Coldroom and Ambient conditions over the six weeks of testing and subjective	February, 1992
Complete the six month testing for analytical and subjective testing	May, 1992
Completion report and recommen- dations	June, 1992

# **Brand Maintenance**

## **Objective:**

To assist Technical Services personnel in making recommendations for corrective actions to keep all current brands within specified delivery targets.

2021385443

# **Brand Maintenance**

## **Explanatory Introduction:**

Primarily due to fluctuations in tobacco blend availability, minor changes in the specifications of certain products have to be made to maintain delivery (tar, menthol) targets. R&D assists Technical Services in choosing the most appropriate changes.

202138544

# **Brand Maintenance**

**Strategy I:** - Recommend Change

## **Tactic**

Evaluate current data

Evaluate past data for trends

Recommend change or corrective action

2021385445

# **Brand Maintenance**

**Strategy II:** - Teach and Train

**Tactic**

Explain consequences of:

- a. Corrective action if spec. change not required.
- b. Specification change and reason for particular choice.

## FLAVOR TECHNOLOGY PROGRAM

**NAME:** Cox/Kroustalis

### Project Grain

**Objective:** Reduce the use of alcohol and humectants through reformulation

**Introduction:** Several strategies have been developed to reduce the alcohol and humectants which are present in our casings and aftercuts. The reductions will be accomplished in a step-wise manner.

Contingencies are also being explored to remove all of the added alcohol and partially reduce the humectants should this scenario become necessary.

The benefits of the reduced alcohol and humectants would be lower emissions and lower costs.

The liability of lower humectants could be increased filler degradation.

**Strategy I:** Incremental reduction of alcohol concentration in burley top casing.

Tactics	Timetable
---------	-----------

Support implementation of alcohol reduction in BTC on a Factory-by-Factory Basis	As Requested
----------------------------------------------------------------------------------	--------------

**Strategy II:** Reduce alcohol in aftercut, combine with top casing reduction.

Tactics	Timetable
---------	-----------

100% BTC alcohol reduced plus 30% alcohol reduced (52% total alcohol) in Marlboro POL 03005	Complete
---------------------------------------------------------------------------------------------	----------

100% BTC alcohol reduced plus 30% aftercut alcohol reduced humectant rearranged (total alcohol 52%) in Marlboro POL 03015.	March, 1992
----------------------------------------------------------------------------------------------------------------------------	-------------

Factory Trials, further testing	June, 1992
---------------------------------	------------

2021385450

	Support Implementation	As Required
<b>Strategy III:</b>	Reduce/rearrange PG in flavor system combine with BTC and AC alcohol reduction	
	<b>Tactics</b>	<b>Timetable</b>
	100% BTC alcohol reduced + 30% A/C alcohol reduced plus 25% PG reduced flavor system (52% total alcohol, 25% total PG) - POL 03006	Complete
	Additional POL's	June, 1992
	Factory Trials	Dec, 1992
	Support Implementation	As Required
	100% BTC alcohol reduced + 50% A/C reduced plus 25% PG reduced flavor system (67% total alcohol, 25% PG)	Complete
	POL's	September, 1992
	Factory Trials	June, 1993
	Support Implementation	As Required
<b>Strategy IV:</b>	Reduce alcohol in menthol aftercuts using PG rearrangements; combine with top casing reductions (H. Maxwell).	
	<b>Tactics</b>	<b>Timetable</b>
	B&H Menthol Lights 30%, 50% alcohol reductions in AC made in Semi-Works for internal subjectives	March, 1992

2021385451

	B&H Menthol Lights 30%, 50% alcohol reductions in AC plus BTC alcohol reduction planned Semi-Works, internal subjects	June, 1992
	POL testing	September, 1992
	Factory trials with reformulated flavors	As Required
<b>Strategy V:</b>	Remove 100% added alcohol in aftercuts non-menthol and menthol using PG rearrangement/Sonolator; combine BTC alcohol reduction.	
	<b>Tactics</b>	<b>Timetable</b>
	1. 100% BTC alcohol reduction, plus 100% A/C alcohol reduction in Marlboro	Complete
	Further non-menthol models to be made in Semiworks for potential POL's	May, 1992
	2. 100% alcohol reduced A/C B&H Menthol Lights Semi-Works small scale,	Complete
	Further menthol models to be made in Semiworks for potential POL's	June, 1992

**Resources:**

Flavor Technology	S. Ruziak - 0.60 man years
Flavor Technology	H. Maxwell - 0.20 man years
Semiworks	G. Romig/J. Warren

2021385452

## Stable Menthol Program 1992 Operational Plan

**Objective:** Develop new menthol technology to produce consistent menthol delivery in smoke under normal field conditions.

**Introduction:** Menthol migrates from rod to filter resulting in decreased menthol deliveries in smoke over time. Stable menthol technology would result in products with consistent puff and constant menthol delivery. Program benefits include: decrease in customer complaints, decrease in menthol loss during application, decrease in variation of menthol delivery and potential proprietary technology providing a competitive advantage. Downsides include: cost increase, potential application problems and equipment contamination.

**Strategy #1:** Determine viability of menthol encapsulation via the M-CAP Technologies International process.

**Tactics:** Approval has been given to M-CAP's proposal for menthol encapsulation. Initial feasibility experiments will be conducted by M-CAP using four shell materials acceptable for use in PM products. 3/92.

Process Development (W. Nichols) will evaluate plain beads for determination of physical properties, i.e., flowability. 3/92.

Assuming that successful menthol encapsulation is achieved, Flavor Technology (H. Maxwell) will evaluate the potential for spray application of encapsulated menthol onto filler. Process Development will evaluate alternate applications of encapsulated menthol. 4/92.

Machine-made cigarettes will be produced in the Semi-Works for in-house (FTD) subjective evaluations, smoke menthol delivery (CTSD), accelerated aging studies (FTD) and cost analysis. 5/92.

A comprehensive proposal will be prepared based on subjective and cost considerations. 6/92.

2021385453

Strategy #2: Investigate the feasibility of yeast encapsulation.

Tactics: Chemical Research (Y. Houminer) will conduct in-house feasibility studies for yeast encapsulation. Washed brewer's yeast will be obtained from Miller Brewing for the initial investigations. 3/92

Yeast encapsulated menthol will be sprayed on tobacco for preparation of machine-made cigarettes in the Semi-Works. The cigarettes will be evaluated for subjectives, menthol delivery and stability studies. 4/92

A comprehensive proposal will be prepared based on cost and subjective considerations. 6/92

Strategy #3: Investigate the feasibility of *in situ* alginate crosslinking and menthol encapsulation via the Cast Leaf system and/or extrusion. 3/92

Tactics: Process Development (J. Washington) will investigate whether available calcium from tobacco can be used as the alginate crosslinking agent for menthol encapsulation in a modified Cast Leaf process. 3/92

Process Development (W. Nichols) will investigate whether co-extruded tobacco/alginate/menthol can utilize calcium from tobacco for alginate crosslinking/encapsulation. 3/92

Flavor Tehnology (H. Maxwell) and Cigarette Tehnology (B. Hendricks) will prepare cigarettes in the Semi-Works for subjective and stability evaluations. 3/92

Strategy #4: Investigate menthol on dope for delivery stability.

Tactics: Cigarette Tehnology (G. Patron) will prepare cigarette filters with menthol on dope tow from Eastman for stability evaluations. 4/92

Flavor Technology will perform subjective evaluations of fresh and aged cigarettes to determine stability. 5/92

Results of this investigation and recommendations will be issued by the end of June, 1992.

2021385454

**Strategy #5:** Investigate the feasibility of cigarette mentholation via PVA and PZ addition.

**Tactics:** G. Patron will review past investigations for this approach prior to model design. 3/92

Marlboro FF and Lights models will be designed by Patron and produced in the Semi-Works. 4/92

Subjective and accelerated aging evaluations will be performed prior to issuing a recommendation based on findings. 6/92

**Strategy #6:** Evaluate feasibility of filler mentholation via liquid CO<sub>2</sub>.

**Tactics:** Lab scale filler mentholation via liquid CO<sub>2</sub> will be conducted to produce sufficient quantities for machine-made cigarettes. 3/92

Cigarettes will be produced in the Semi-Works for smoke menthol delivery, subjective evaluation and stability determinations. 3/92

**Resource Allocations (Man-Years):**

Semi-Works	0.3
Cigarette Testing	0.3
Analytical Research	0.1
<b>Total</b>	<b>4.5</b>

2021385455

## Reduced Humectants

**Objective:** Unify the humectant levels in domestic and export (lower humectant level) RL's and RCB

**Introduction:** Sheet products (RL's and RCB) were made at the Processing Plants with reduced humectant levels; target solubles (46-47%) and increased solubles (50%). After evaluation, the target soluble sheets were incorporated into the Marlboro blend and POL quantities were made.

The benefits of the reduction of humectants would be lower emissions and cost savings

**Strategy:** RL's and RCB with reduced humectant levels were produced in production for physical and subjective testing.

Tactics	Timetable
Reduced humectant sheet, target solubles (46-47%) incorporated into Marlboro blend, POL 0385	Complete
Factory trials planned to establish primary conditions	April, 1992
Recommendation of changes in primary specifications	June, 1992
Assist in implementation, when requested	

**Resources:**

Flavor Technology	S. Ruziak - 0.05 man years
Flavor Technology	J. Swain - 0.01 man years

CTSD	J. Lightner

2021385456

## **Alternate Humectants**

**Objective:** Develop and evaluate alternate humectants replacing propylene glycol and glycerin in PM brands

**Introduction:** Sheet products (RL's and RCB) were made at the Processing Plants with isosweet replacing the humectants. Casings were made with partial isosweet replacement of humectants and casing preblend flavors moved to the A/C.

The benefits of replacing humectants is a defensive strategy which would also lower propylene glycol emissions.

The possible liabilities are degradation during processing, product stability and lower product yield.

**Strategy:** RL's and RCB with alternate humectant were incorporated in Marlboro blend with alternate humectant in the flavor system

<b>Tactics</b>	<b>Timetable</b>
Semiwork trial	Completed
Alternate Humectant POL	June, 1992
Replicate POL, if needed	October, 1992
Recommendations (Potential defensive strategy)	December, 1992

### **Resources:**

Flavor Technology	S. Ruziak - 0.05 man years

## Liquid Licorice

**Objective:** Implement the use of a liquid licorice to replace the existing block licorice in PM formulae which meets Philip Morris requirements of cost effectiveness and product consistency (specifications). The liquid licorice must be subjectively equal to the existing block licorice in PM finished products.

**Introduction:** Licorice is used in approximately 90% of the Philip Morris production volume and costs approximately \$20 million annually. R&D and Operations Services have attempted to find alternatives to the block licorice for at least ten years. Handling the product is labor intensive and preparing the product for application is energy intensive (heat requirements) and logistic intensive (lead time for melt). None of the following efforts have been successful in totally replacing Ship Brand licorice extract:

Various liquid licorice.

Developed licorice replacements (1974).

Qualifying the current spray-dried licorice (Police) in domestic production.

It is believed that a newly-offered liquid licorice by MacAndrews & Forbes (Mafco) will resolve most associated problems with block licorice.

**Strategy #1:** Develop an analytical and subjective database.

<u>Tactics</u>	<u>Timetables</u>
Obtain samples of each trial batch of Liquid Licorice 15 that is produced at MacAndrews & Forbes for analytical and subjective analyses	On going
Develop new casing using the liquid licorice	Complete
Internal Testing of the new casing on Marlboro	Complete

2021385458

**Strategy #2:** Implement cost analysis for all domestic production locations and research the pricing of the product by the vendor.

<u>Tactics</u>	<u>Timetables</u>
Assess manpower requirements, storage requirements, re-tooling requirements, all associated costs and potential savings	February, 1992
Cost analysis by Manufacturing Engineering, Purchasing, and Technical Services	February, 1992
Overview of cost analysis/potential cost reduction	March, 1992
Assess best back-up system to the liquid licorice	May, 1992

**Strategy #3:** Develop operating specifications for liquid licorice and Ship BJ SDLE.

<u>Tactics</u>	<u>Timetables</u>
Review database from component analyses	March, 1992
Compare our database with vendor data	April, 1992
Define product specification	August, 1992

**Strategy #4:** Implement arrangements for consumer tests.

<u>Tactics</u>	<u>Timetables</u>
Internal testing	February, 1992
POL testing	March 23, 1992

2021385459

POL testing	May 23, 1992
Recommendation	July, 1992
Casing adjustment, if needed	August, 1992
Repeat testing, if needed	October, 1992
Recommendation	December, 1992.

**Strategy #5:** Determine the feasibility of replacing current spray-dried licorice extract with Ship BJ SDLE in export blended strip operations and export dry flavors, and replacing block licorice with liquid licorice in export blended strip operations.

**Status:** Currently, export strip operations uses both block and spray-dried licorice depending on the country destination and export dry flavors use the spray-dried licorice.

<u>Tactics</u>	<u>Timetables</u>
Produce export blended strips at 20th Street using liquid licorice.	April, 1992
Produce cigarettes from export strip and export dry flavor	May, 1992
Internal panel testing	June, 1992
Recommendations	July, 1992
Casing adjustment, if needed	August, 1992
Internal panel testing	October, 1992
External testing, if needed	November, 1992
Recommendation	December, 1992

## Marlboro RI

**Objective:** Develop a Marlboro Flavor System containing fewer than 40 listed components which support the subjective character in Marlboro cigarettes.

**Introduction:** U.S. Congress has attempted to pass legislation requiring tobacco manufacturers to label their products with ingredient information and to have Congress-appointed labs to perform certain tests on the disclosed ingredients.

This project is an effort to reduce the ingredient list for Marlboro without changing its subjective character. Current developed casing, aftercut, and blends lists 28 components including tobacco. A new recon (RLL) was developed to replace the current standard recons. Over forty models (16 mg, 13 mg and 12 mg inclusive) were internally evaluated during development in 1990 and 1991.

**Strategy #1:** Develop new reduced-ingredient flavor system and subjective evaluation of the blend modifications.

<u>Tactics</u>	<u>Timetables</u>
Development of new casing and after-cut systems	On going
Evaluate most recent blend models	January, 1992
Request new blend components	January, 1992
Produce new RLL at C Pilot Plant	March, 1992
Produce new ET with sucrose at D Pilot Plant	March, 1992
Chemical and physical analyses	April, 1992
Evaluation of new components (expanded and recons)	May, 1992

2021385462

Evaluate Net expanded materials                  June, 1992

Recommendation of blend components: July, 1992

Production of new blend                  August, 1992

Evaluation of new blend                  September, 1992

Panel testing                  October, 1992

**Strategy #2:** Develop best flavor system with reduced ingredients.

<u>Tactics</u>	<u>Timetables</u>
Evaluation of flavor components	April, 1992
Optimize flavor levels, examine modification to the burley spray, and optimize casing and flavor levels	May, 1992
POL Testing	October, 1992
Continue assessment, make modifications where necessary	As needed
Recommendations	December, 1992
Factory trials	As needed

**Resources:**

2021385463

**Wish List:** Find alternative to using natural honey bright casing due to supply issues and handling logistics.

**2021385464**

## DISCOUNT RI

**Objective:** Develop a Discount Flavor System which is cost effective and has acceptable flavor characteristics on a newly-developed, cost effective blend and cigarette design.

**Introduction:** Continuous growth of discount brands raises concerns over profit margins -- discount brands sold at discount costs must be produced at discount costs -- with positive subjective response from the consumer.

Development work is required to explore the different possibilities for Product development. Results from Marlboro RI will impact heavily on this development. Bristol will be a starting reference since it contains an estimated 60 components.

**Strategy:** Development of cost effective blends, casings and flavor systems.

<u>Tactics</u>	<u>Timetables</u>
Initiate discussions with Leaf Department regarding blend development	February, 1992
Make models for subjective and analytical testing	April, 1992
Casing and aftercut development	June, 1992
Filter and Paper Development	June, 1992
Subjective evaluation	July, 1992
Flavor modification	August, 1992
Phase two testing	September, 1992
Internal Testing	November, 1992
Recommendation	December, 1992

2021385465

## **Flavor System Simplification/Revisions 1992 Operational Plan**

**Objectives:** To eliminate unwanted ingredients from the PM direct materials to comply with worldwide legal requirements.

To reduce ingredients and simplify sources of materials.

The project consists of a continuous evaluation of ingredients by Regulatory with a yearly review of completed products.

**Introduction:** The project involves the work by Flavor Technology, Regulatory, Technical Services, Purchasing and the Flavor Center in an effort to maintain and control the quantity and quality of Philip Morris direct materials used in products.

**Strategy #1:** To subjectively evaluate revisions and first shipment samples from suppliers where ingredients have been removed and determine acceptability.

Revisions received from Regulatory are investigated and evaluated as the need arises. This program takes high priority with the appropriate functional groups interacting when ingredients need to be removed from suppliers flavors. The requested revisions for 1991 have been completed. There are no outstanding revisions for 1992.

**Tactics:** **Regulatory:**  
Monitor regulatory requirements worldwide and oversee removal of unwanted ingredients.

Determine which direct material should be revised.

Request revisions from suppliers for existing direct material codes.

Distribute revisions samples to analytical group for analysis. If product is clean, send samples to Flavor Technology for subjective evaluation.

2621385467

2021385468

Flavor Center:

Test incoming first production materials to ensure conformity to material specifications and free from removed components.

Obtain sample for Flavor Technology subjective testing.

Flavor Technology:

Perform subjective testing on revisions and first shipment samples evaluating both the aromatic profile of the samples as well as subjective smoking characteristics and differences between control and revised samples.

Report results to Purchasing, Technical Services, Flavor Center and Regulatory.

Purchasing:

Assign new direct material codes as revision samples are received by Regulatory.

Maintain revision information.

Monitor inventories to minimize inventories of materials currently being revised.

Inform vendors when orders are based on 60 day production schedule and status of "old" material.

Follow up with vendors to track problems and expedite shipments.

Technical Services:

Modify formulas as approved revised materials are received.

Monitor preblend inventories to assure adequate inventories of materials.

Notify Purchasing of upcoming requirements for new flavors and or changes in requirements for existing flavors.

Timetable: Evaluated on a yearly basis to be completed by year end with quarterly review.

Strategy #2: To subjectively evaluate and locate possible alternate vendors of current direct material products as requested by Purchasing and Technical Services. Alternate suppliers are investigated on a as needed basis as a result of poor quality with some existing suppliers. Requests are received by Flavor Technology from Technical Services as the need arises.

Tactics: Flavor Technology:

Evaluate subjectively and analytically new possible sources of alternate flavor materials against control samples to maintain comparable subjective and specifications.

Technical Services:

To supply formulations and samples of control products and alternate suppliers to Flavor Technology.

Purchasing:

To aid in determining the need for alternate suppliers of PM products.

Timetable: This is reviewed on a quarterly basis.

Strategy #3: To facilitate the removal of direct material components requested by Regulatory in an effort to reduce the number of Philip Morris sole source ingredients and the removal of unwanted flavors.

For 1992 a preliminary list of potential direct material drops has been received from Regulatory. This list represents PM sole source flavors that are at a low usage level. Efforts will be made to eliminate these if subjectively possible without changing existing flavor profiles. The list contains 14 flavor items.

2021385469

2021385470

**Tactics:**

**Regulatory:**

Monitor regulatory requirements worldwide and oversee the removal of unwanted ingredients from flavors and the removal of flavor systems.

Determine which direct material should be removed.

**Flavor Technology:**

Determine subjectively the best method to remove the flavor by evaluating its use in flavor concentrates and aftercuts. Methods involve either total elimination, finding alternate flavors or creating new flavor systems to mimic its effect.

Supply Technical Services with the new flavor concentrate or aftercut formulation.

Conduct subjective testing with both aromatic evaluations and cigarette flavor aromatics.

**Technical Services:**

Modify formulas as approved revised formulas are received.

**Timetable:**

Quarterly review of products removed to complete the task on a yearly basis.

**Strategy #4:**

To aid the Flavor Center in subjective evaluations of quality and flavor related issues.

We presently receive approximately four requests a week to evaluate both incoming flavors as well as compounded flavor concentrates. These are evaluated subjectively and also analytically when needed. Samples are received from Technical Services when a problem arises.

**Tactics:**

**Flavor Technology:**

Subjectively evaluate quality and flavor related issues submitted by Technical Services.

Report findings and disposition to Technical Services.

Technical Services:

Supply Flavor Technology with information and samples of problem flavors.

Timetable: Evaluated as received in a timely fashion. Quarterly review of completed products.

Strategy #5: To simplify flavor formulations as needed by reducing the number of direct material additions without subjectively altering the existing flavor.

Initiate a program to better manage and control PM direct materials, suppliers and quality of flavor concentrates.

Tactics: Flavor Technology:

Subjectively evaluate reduced ingredient formulations against control formulations from both an aromatic profile and subjective smoking characteristics.

Timetable: Formulate as received in a timely fashion. Quarterly review of completed products.

Resource Allocations (Man-Years):

Flavor Technology:	0.60
Technical Services:	0.80
Regulatory:	0.60
Flavor Center:	0.05
Purchasing:	0.10
Total	2.15

20213855471

## FLAVOR CENTER

**Objective:** To subjectively evaluate materials from the Flavor Center which show borderline analytical results.

**Introduction:** Approximately three years ago, specifications were set for raw materials, preblends, and finished flavors. Incoming materials are then checked analytically for compliance. When analyses are suspect/borderline, FTD personnel are requested through Operations Services to verify analyses and/or subjectively evaluate samples. These additional determinations of quality have been beneficial in maintaining specifications and resolving "problem batches" of flavors.

**Strategy:** Analytically and/or subjectively evaluate suspect materials submitted through Operations Services from the Flavor Center.

<u>Tactics</u>	<u>Timetable</u>
Test for analytical verification.	As requested
Subjectively evaluate odor, taste and/or applied to target product.	As requested

## **Operational Plan 1992 - Menthol Program Project Levo**

**I.     Objective:**     To develop a menthol product to decrease PM's dependence on natural menthol through the use of synthetic menthol.

A. **Introduction:** Project Levo was designed as a cost reduction program for Philip Morris for our menthol market. In pursuing this goal, flavor systems will be developed using synthetic menthol in addition to menthol isomers and analogous compounds.

**II.    Strategies:**

- A. POL has been made and released to establish a baseline for further testing.
- B. Flavor Technology work continues to evaluate new prototypes made with additives.
- C. Additional testing (POL) will be conducted externally.

**III.   Timetables:**

- A. 1st Quarter - Internal Testing
- B. 2nd Quarter - External Testing
- C. 3rd Quarter - Make Recommendations

**IV.    Resource Allocations:**

- A. Flavor Technology
- B. Cigarette Testing

2021385473

## **Natural/Synthetic Glycerin/Triacetin 1992 Operational Plan**

- Objectives:**
1. To determine by sensory and analytical methods the acceptance specification of natural glycerin, by the 4th quarter, 1992.
  2. To qualify natural glycerin-based triacetin as the cigarette filter plasticizer by 3rd quarter, 1992.
  3. To identify the impurities present in natural glycerin and natural glycerin-based triacetin which may impart off flavors in cigarettes by the 4th quarter.

**Introduction:** Glycerin is used as a cigarette filler plasticizer and is incorporated in casings and aftercuts. In order to minimize rejections of glycerin received by Philip Morris, analytical and sensory testing will be performed for glycerin derived from natural sources.

In addition, natural glycerin-based triacetin, a cigarette filter plasticizer, will be evaluated and compared to synthetic glycerin-based triacetin for qualification to address Philip Morris' needs as a result of partnering with Hoechst-Celanese.

In order to secure a continuous supply and in anticipation of a shift from synthetic to all-natural based glycerin and triacetin, it is vital for us to have alternate suppliers. The quality of these all-natural based glycerin/triacetin must meet our stringent sensory and analytical requirements.

**Strategy #1:** Subjective evaluation of glycerin and triacetin.

**Tactics:**

- A. Cigarettes containing natural and synthetic glycerin from all proposed vendors will be prepared and evaluated subjectively to determine subjective threshold limits for accept/reject criteria.

March, 1992

- B. Cigarettes containing natural and synthetic glycerin-based triacetin from all proposed vendors will be prepared and will be subjectively evaluated.

2021385474

to determine threshold limits for qualification and accept/reject criteria of natural glycerin-based triacetin.

June, 1992

Strategy #2: Analytical characterization of glycerin and triacetin contaminants.

Tactics: Although most of the impurities have been tentatively identified, additional identifications and confirmations will be required to complete this investigation. Identifications will be made using a variety of instrumentation including GC, GC/MS, GC/FTIR and FTIR. Reference standards will also be purchased for confirmations.

September, 1992

Strategy #3: Analytical/Sensory correlations and guidelines.

Tactics:

- A. Several production batches of natural glycerin/triacetin will be analyzed to determine batch to batch variations.
- B. Analytical results will be correlated to sensory results to determine whether analytical information can be used for accept/reject purposes.
- C. POL testing of natural glycerin-based triacetin to confirm internal subjective findings.
- D. Make recommendations for best evaluation approach.

December, 1992

Resource Allocations (Man-Years):

B. Johnson - Purchasing	0.02
K. Lam - Flavor Technology	0.15
R. Hale - Flavor Technology	0.15
A. Finley - Filter Technology	0.01
T. Hoskin - Semi-Works	0.02
V. Willis/K. Deane - FTD	0.15
Total	0.50

2021385475

## **UNCOOKED FLAVOR SYSTEM (75-814 REPLACEMENT)**

**Objective:** To replace cooked flavor for RLTC due to possible regulatory changes.

**Introduction:** The definition/safety of reaction flavors are being questioned in some Foreign countries. As a precautionary measure, an alternate will be developed for Cooked Flavor 75-814.

**Strategy:** Develop, evaluate, and test alternate flavor in RLTC.

<b><u>Tactics</u></b>	<b><u>Timetable</u></b>
Initiate flavor modifications.	March, 1992
Subjective evaluation of flavors applied lab-scale.	June, 1992
Subjective evaluation of flavors in RL Pilot trials.	July, 1992
Modifications, if necessary prior to Park 500 trials.	September, 1992
Park 500 trials of alternate flavor for POL test.	December, 1992
Complete POL tests of substitutions as contingency to respond to potential regulatory changes.	March, 1993

**Resources:**

2021385476

**Burley Spray  
1992 Operational Plan**

**Objective:** Develop Burley Spray specifications for factory primaries by September 1992.

**Introduction:** Current Burley Spray specifications deal with formulation and holding/application temperatures of 180°F for up to 72 hours. Flavor Technology has been using sucrose level in Burley Spray as an indicator of quality for POL testing. However, since there has not been extensive testing in the past, Burley Spray holding and application temperatures merit investigation as a function of subjective quality and stability to develop specifications for this casing material.

**Strategy #1:** Evaluate subjectively Burley Spray containing sucrose vs. fructose and glucose.

**Tactics:** Prepare current formulation Burley Spray and hold until sucrose inversion reaches 50%.

Prepare fresh current formulation Burley Spray.

Prepare fresh Burley Spray with fructose and glucose (1:1) replacing sucrose.

Prepare cigarettes (100% burley, Marlboro and Merit) with the above Burley Sprays in the Semi-Works.

Subjectively evaluate cigarettes with "fresh" vs. "aged" and "fresh" and/or "aged" Burley Spray containing sucrose vs. Burley Spray containing fructose/glucose.

**Timetable:** March, 1992

**Strategy #2:** Evaluate Burley Spray processing modifications.

**Tactics:** Prepare current formulation Burley Spray and hold at 160°F for 72 hours. Analyze twice daily for sucrose content and inversion.

2021385477
